## ANSWERS TO QUESTIONS

1. The primary objective of financial reporting for external users is to provide financial information about the reporting entity that is useful to existing and potential investors, lenders, and other creditors in making decisions about providing resources to the entity. These users are expected to have a reasonable understanding of accounting concepts and procedures. Usually, they are interested in information to assist them in projecting future cash inflows and outflows of a business.
  
2.
  - (a) An asset is a probable future economic benefit owned or controlled by the entity as a result of past transactions.
  - (b) A current asset is an asset that will be used or turned into cash within one year; inventory is always considered a current asset regardless of how long it takes to produce and sell the inventory.
  - (c) A liability is a probable future sacrifice of economic benefits of the entity arising from preset obligations as a result of a past transaction.
  - (d) A current liability is a liability that will be settled by providing cash, goods, or other services within the coming year.

Chapter 02 - Investing and Financing Decisions and the Accounting System

- (e) Additional paid-in capital is the owner-provided financing to the business that represents the excess of the amount received when the common stock was issued over the par value of the common stock.
  
- (f) Retained earnings are the cumulative earnings of a company that are not distributed to the owners and are reinvested in the business.

- 3 (a) The separate-entity assumption requires that business transactions are separate from the transactions of the owners. For example, the purchase of a truck by the owner for personal use is not recorded as an asset of the business.
  - (b) The stable monetary unit assumption requires information to be reported in the national monetary unit without any adjustment for changes in purchasing power. That means that each business will account for and report its financial results primarily in terms of the national monetary unit, such as Yen in Japan and Australian dollars in Australia.
  - (c) Under the continuity or going-concern assumption, businesses are assumed to operate into the foreseeable future. That is, they are not expected to liquidate.
  - (d) The historical cost principle requires assets to be recorded at the cash-equivalent cost on the date of the transaction. Cash-equivalent cost is the cash paid plus the dollar value of all noncash considerations.
- 4 Accounting assumptions are necessary because they reflect the scope of accounting and the expectations that set certain limits on the way accounting information is reported.
  - 5 An account is a standardized format used by organizations to accumulate the dollar effects of transactions on each financial statement item. Accounts are necessary to keep track of all increases and decreases in the fundamental accounting model.
  - 6 The fundamental accounting model is provided by the equation:  
$$\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$$
  - 7 A business transaction is (a) an exchange of resources (assets) and obligations (debts) between a business and one or more outside parties, and (b) certain events that directly affect the entity such as the use over time of rent that was paid prior to occupying space and the wearing out of equipment used to operate the business. An example of the first situation is (a) the sale of goods or services. An example of the second situation is (b) the use of insurance paid prior to coverage.
  - 8 Debit is the left side of a T-account and credit is the right side of a T-account. A debit is an increase in assets and a decrease in liabilities and stockholders' equity. A credit is the opposite -- a decrease in assets and an increase in liabilities and stockholders' equity.

9. Transaction analysis is the process of studying a transaction to determine its economic effect on the entity in terms of the accounting equation:

$$\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$$

The two principles underlying the process are:

- \* every transaction affects at least two accounts.
- \* the accounting equation must remain in balance after each transaction.

The two steps in transaction analysis are:

- (1) identify and classify accounts and the direction and amount of the effects.
- (2) determine that the accounting equation ( $A = L + SE$ ) remains in balance.

10. The equalities in accounting are:

- (a)  $\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$
- (b)  $\text{Debits} = \text{Credits}$

11. The journal entry is a method for expressing the effects of a transaction on accounts in a debits-equal-credits format. The title of the account(s) to be debited is (are) listed first and the title of the account(s) to be credited is (are) listed underneath the debited accounts. The debited amounts are placed in a left-hand column and the credited amounts are placed in a right-hand column.

12. The T-account is a tool for summarizing transaction effects for each account, determining balances, and drawing inferences about a company's activities. It is a simplified representation of a ledger account with a debit column on the left and a credit column on the right.

13. The current ratio is computed as current assets divided by current liabilities. It measures the ability of the company to pay its short-term obligations with current assets. A ratio above 1.0 normally suggests good liquidity (that is, the company has sufficient current assets to settle short-term obligations). Sophisticated cash management systems allow many companies to minimize funds invested in current assets and have a current ratio below 1.0. However, a ratio that is too high in relation to other competitors in the industry may indicate inefficient use of resources.

14. Investing activities on the statement of cash flows include the buying and selling of productive assets and investments. Financing activities include borrowing and repaying debt, issuing and repurchasing stock, and paying dividends.

								<i>Continuing Case</i>	
								1	40

\* Due to the nature of these cases and projects, it is very difficult to estimate the amount of time students will need to complete the assignment. As with any open-ended project, it is possible for students to devote a large amount of time to these assignments. While students often benefit from the extra effort, we find that some become frustrated by the perceived difficulty of the task. You can reduce student frustration and anxiety by making your expectations clear. For example, when our goal is to sharpen research skills, we devote class time discussing research strategies. When we want the students to focus on a real accounting issue, we offer suggestions about possible companies or industries.

## MINI-EXERCISES

### M2-1.

- F (1) Continuity assumption
- H (2) Historical cost principle
- G (3) Credits
- A (4) Assets
- I (5) Account

### M2-2.

- D (1) Journal entry
- C (2)  $A = L + SE$ , and Debits = Credits
- A (3) Assets = Liabilities + Stockholders' Equity
- I (4) Liabilities
- B (5) Income statement, balance sheet, statement of stockholders' equity, and statement of cash flows

**Dennen Inc.**  
**Balance Sheet**  
**At January 31, 2015**

<b>Assets</b>		<b>Liabilities</b>	
<i>Current assets:</i>		<i>Current liabilities:</i>	
Cash	\$ 14,400	Notes payable	<u>\$ 43,000</u>
Notes receivable	<u>11,000</u>	Total current liabilities	<u>43,000</u>
Total current assets	25,400	<b>Stockholders' Equity</b>	
Equipment	30,100	Common stock	1,010
		Additional paid-in capital	3,490
		Retained earnings	<u>8,000</u>
		Total stockholders' equity	<u>12,500</u>
<b>Total Assets</b>	<u><u>\$55,500</u></u>	<b>Total Liabilities &amp; Stockholders' Equity</b>	<u><u>\$55,500</u></u>

**M2-12.****Current Ratio =**

	<u>Current Assets</u>	÷	<u>Current Liabilities</u>	=	<u>Ratio</u>
2011	<u>280,000</u>	÷	<u>155,000</u>	=	<u>1.806</u>
2012	<u>270,000</u>	÷	<u>250,000</u>	=	<u>1.080</u>

This ratio indicates that Sal's Taco Company has sufficient current assets to settle current liabilities, but that the ratio has also decreased between 2011 and 2012 by .726 (40%). Sal's Taco Company ratio is lower than Chipotle's 2011 ratio (of 3.182), indicating that Sal's Taco Company appears to have weaker liquidity than Chipotle; Sal's has less liquidity to withstand an economic downturn.

## EXERCISES

### E2-1.

- E (1) Transaction
- F (2) Continuity assumption
- B (3) Balance sheet
- P (4) Liabilities
- K (5)  $\text{Assets} = \text{Liabilities} + \text{Stockholders' Equity}$
- M (6) Notes payable
- L (7) Common stock
- H (8) Historical cost principle
- I (9) Account
- Q (10) Dual effects
- O (11) Retained earnings
- A (12) Current assets
- C (13) Separate-entity assumption
- X (14) Par value
- D (15) Debits
- J (16) Accounts receivable
- N (17) Stable monetary unit assumption
- W (18) Faithful representation
- T (19) Relevance
- R (20) Stockholders' Equity

**E2-2.**

**Req. 1**

<u>Received</u>	<u>Given</u>
(a) Cash (A)	Common stock and Additional paid-in capital (SE)
(b) Equipment (A) [or Delivery truck]	Cash (A)
(c) No exchange transaction	—
(d) Equipment (A) [or Computer equipment]	Notes payable (L)
(e) Building (A) [or Construction in progress]	Cash (A)
(f) Intangibles (A) [or Copyright]	Cash (A)
(g) Retained earnings (SE) [Received a reduction in the amount available for payment to stockholders]	Cash (A)
(h) Land (A)	Cash (A)
(i) Intangibles (A) [or Patents]	Cash (A) and Notes payable (L)
(j) No exchange transaction	—
(k) Investments (A)	Cash (A)
(l) Cash (A)	Short-term notes payable (L)
(m) Note payable (L) [Received a reduction in its promise to pay]	Cash (A)

**Req. 2**

The truck in (b) would be recorded as an asset of \$20,800. The land in (h) would be recorded as an asset of \$75,500. These are applications of the historical cost principle.

**Req. 3**

The agreement in (c) involves no exchange or receipt of cash, goods, or services and thus is not a transaction. Since transaction (j) occurs between the owner and others, there is no effect on the business because of the separate-entity assumption.

**E2-3.**

<u>Account</u>	<u>Balance Sheet Categorization</u>	<u>Debit or Credit Balance</u>
(1) Accounts Receivable	CA	Debit
(2) Retained Earnings	SE	Credit
(3) Taxes Payable	CL	Credit
(4) Prepaid Expenses	CA	Debit
(5) Common Stock	SE	Credit

	<u>103,160</u>

Req. 2

Assets \$ 130,000 = Liabilities \$ 21,000 + Stockholders' Equity \$ 109,000

Req. 3

The agreement in (c) involves no exchange or receipt of cash, goods, or services and thus is not a transaction. Since transaction (f) occurs between the owner and others, there is no effect on the business due to the separate-entity assumption.

**E2-9.**

Req. 1

<b>Transaction</b>	<b>Brief Explanation</b>
1	Issued common stock to shareholders for \$15,000 cash. (FastTrack Sports Inc. is a corporation because it issues stock. Par value of the stock was \$0.10 per share because \$1,500 common stock amount divided by 15,000 shares issued equals \$0.10 per share).
2	Borrowed \$75,000 cash and signed a short-term note for this amount.
3	Purchased land for \$16,000; paid \$5,000 cash and gave an \$11,000 short-term note payable for the balance.
4	Loaned \$4,000 cash; borrower signed a short-term note for this amount (Note Receivable).
5	Purchased store fixtures for \$9,500 cash.
6	Purchased land for \$4,000, paid for by signing a short-term note.

Req. 2

**FastTrack Sports Inc.**  
**Balance Sheet**

Assets \$ 13,700 = Liabilities \$ 7,000 + Stockholders' Equity \$ 6,700

Req. 4

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$11,200 + \$1,000}{\$2,200} = \frac{\$12,200}{\$2,200} = 5.55$$

This ratio indicates that, for every \$1 of current liabilities, Higgins maintains \$5.55 of current assets. Higgins' ratio is higher than the industry average of 1.50, indicating that Higgins maintains a lower level of short-term debt and has higher liquidity. However, maintaining such a high current ratio also suggests that the company may not be using its resources efficiently. Increasing short-term obligations would lower Higgins' current ratio, but this strategy alone would not help its efficiency. Higgins should consider investing more of its cash in order to generate future returns.

Totals	<u>\$72,000</u>	<u>\$72,000</u>

**E2-15. (continued)**

Req. 3

**Strauderman Delivery Company, Inc.**  
**Balance Sheet**  
**At December 31, 2014**

<b>Assets</b>		<b>Liabilities</b>	
<i>Current Assets</i>		<i>Current Liabilities</i>	
Cash	\$35,000	Short-term notes payable	\$16,000
Short-term note receivable	<u>4,000</u>	<i>Total Current Liabilities</i>	16,000
<i>Total Current Assets</i>	39,000	Long-term notes payable	<u>16,000</u>
Land	12,000	<i>Total Liabilities</i>	<u>32,000</u>
Equipment	<u>21,000</u>	<b>Stockholders' Equity</b>	
		Common stock	10,000
		Additional paid-in capital	<u>30,000</u>
		<i>Total Stockholders' Equity</i>	<u>40,000</u>
<b>Total Assets</b>	<u>\$72,000</u>	<b>Total Liabilities &amp; Stockholders' Equity</b>	<u>\$72,000</u>

Req. 4

	<u>Current Assets</u>	÷	<u>Current Liabilities</u>	=	<u>Current Ratio</u>
<b>2014</b>	\$39,000	÷	\$16,000	=	2.44
<b>2015</b>	52,000	÷	23,000	=	2.26
<b>2016</b>	47,000	÷	40,000	=	1.18

The current ratio has decreased over the years, suggesting that the company's liquidity is decreasing. Although the company still maintains sufficient current assets to settle the short-term obligations, this steep decline in the ratio may be of concern – it may be indicative of more efficient use of resources or it may suggest the company is having cash flow problems.

Req. 5

The management of Strauderman Delivery Company has already been financing the company's development through additional short-term debt, from \$16,000 in 2014 to \$40,000 in 2016. This suggests the company is taking on increasing risk. Additional lending, particularly short-term, to the company may be too much risk for the bank to absorb. Based solely on the current ratio, the bank's vice president should consider not providing the loan to the company as it currently stands. Of course, additional analysis would provide better information for making a sound decision.

**E2-16.**

<b>Transaction</b>	<b>Brief Explanation</b>
(a)	Issued 100,000 shares of common stock (par value \$0.02 per share) to shareholders in exchange for \$20,000 cash and \$5,000 tools and equipment.
(b)	Loaned \$1,800 cash; borrower signed a note receivable for this amount.
(c)	Purchased a building for \$40,000; paid \$10,000 cash and signed a \$30,000 note payable for the balance.
(d)	Sold tools and equipment for \$900 cash (their original cost).

**P2-2.**

Req. 1

East Hill Home Healthcare Services was organized as a corporation. Only a corporation issues shares of capital stock to its owners in exchange for their investment, as in transaction (a).

Req. 2 (On next page)

Req. 3

The transaction between the two stockholders (Event e) was not included in the tabulation. Since the transaction in (e) occurs between the owners, there is no effect on the business due to the separate-entity assumption.

Req. 4

(a) Total assets = \$111,500 + \$18,000 + \$5,000 + \$510,500 + \$160,000 + \$65,000  
= \$870,000

(b) Total liabilities = \$100,000 + \$180,000  
= \$280,000

(c) Total stockholders' equity = Total assets - Total liabilities  
= \$870,000 - \$280,000 = \$590,000

(d) Cash balance = \$50,000 + \$90,000 - \$9,000 + \$3,500 - \$18,000 - \$5,000  
= \$111,500

(e) Total current assets = Cash \$111,500 + Short-Term Investments \$18,000 + Notes Receivable \$5,000 = \$134,500

Req. 5

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$111,500 + \$18,000 + \$5,000}{\$100,000} = \frac{\$134,500}{100,000} = 1.35$$

This suggests that for every \$1 in current liabilities, East Hill maintains \$1.35 in current assets. The ratio suggests that East Hill is likely maintaining adequate liquidity and using resources efficiently.
