**1. Why is CaO the symbol for calcium oxide instead of CAO?**

- a. both can be the symbols for calcium oxide
- b. both are incorrect; the symbol is cao
- c. a capital letter means a new symbol
- d. both are incorrect as the symbol should be CaO<sub>x</sub>

ANSWER: c

POINTS: 1

QUESTION TYPE: Multiple Choice

**94. Why are the atomic weights of elements defined as the relative masses of average atoms of the elements?**

ANSWER: The mass number of an isotope is the sum of the number of protons and neutrons in the nucleus of the atoms of the isotope. Also, both protons and neutrons have masses of 1 u. Since the masses of electrons are quite small, the atomic weights of isotopes are almost equal to their mass numbers. Therefore, the atomic weights of elements can be defined as the relative masses of average atoms of the elements.
