AACSB: 7. Application of knowledge

Question Status: New question

Objective: 2.2 Distinguish between commercial banks and other financial institutions in the financial marketplace.

Keywords: financial intermediaries

Principles: Principle 3: Cash flows are the source of value

25) Describe the costs and benefits to investors of owning Mutual Funds.

Answer: Owners of mutual fund shares get professional management of their portfolio, and get a diversified portfolio, as each mutual share is a share in the whole portfolio purchased by the mutual fund. In order to get these benefits, the investor must pay commissions upon purchase, and/or pay yearly management fees. The fees can significantly diminish the value of the shares of the mutual fund to the investor. An alternative for the investor is to buy an index fund, that is a fund that tracks an index such as the Dow Jones Industrial Average or the S & P 500. An index fund tracking the DJIA, for example, will automatically purchase stocks in the same percentage that they are used to determine the Dow Jones Industrial Average. Owning an index fund reduces costs, because there is no need to have professionals running the portfolio.

48) The primary markets sell only stocks and bonds issued by major corporations while the secondary markets sell securities issued by newer and smaller companies.

Answer: FALSE

Diff: 1

AACSB: 3. Analytic thinking skills

Question Status: Previous edition

Objective: 2.3 Describe the different securities markets for bonds and stocks.

Keywords: financial markets

Principles: Principle 4: Market Prices Reflect Information

49) Explain how securities markets provide a link between the corporation and investors.
Answer: First, the corporation sells its securities, which can be common stock, preferred stock, or debt. Since the firm receives money directly from these sales, these are primary market transactions. The firm then invests the money it receives, with the corporate purpose of maximizing the value of its shares of common stock. The corporation must then pay back its investors, and pay taxes. Any other monies can be reinvested into the firm. When these securities are traded on the market, these are secondary market transactions, and by making these trades, investors determine the market value of the securities.

AACSB: 3. Analytic thinking skills

Question Status: Previous edition

Objective: 2.3 Describe the different securities markets for bonds and stocks.

Keywords: financial markets

Principles: Principle 4: Market Prices Reflect Information

50) Describe the tax benefits to a corporation of issuing debt rather than issuing stock.
Answer: The greatest advantage to issuing debt is that the interest payments on debt are tax deductible, and that dividend payments are not tax deductible. In addition, the interest payment is a known amount, and the required return on debt is generally lower than the investor required return on equity because the cash flows to investors are more predictable for debt than they are for equity.
