**MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.****Find the slope of the line passing through the given pair of points.**

1) (6, 2) and (9, 4)

1) \_\_\_\_\_

A)  $-\frac{2}{3}$

B)  $\frac{3}{2}$

C)  $\frac{2}{3}$

D)  $\frac{2}{5}$

2) (-8, 8) and (-4, -7)

2) \_\_\_\_\_

A)  $-\frac{4}{15}$

B)  $-\frac{15}{4}$

C)  $-\frac{1}{12}$

D)  $\frac{15}{4}$

3) (-9, -4) and (-9, -9)

3) \_\_\_\_\_

A) 0

B)  $\frac{13}{18}$

C) Not defined

D)  $-\frac{5}{18}$

4) (-5, -8) and (8, -8)

4) \_\_\_\_\_

1992, 2	\$25,200
1993, 3	\$26,800
1994, 4	\$27,200

- A)  $y = -1591x + 22,750$   
 B)  $y = 1350x$   
 C)  $y = 29.5x + 22,750$   
 D)  $y = 1350x + 22,750$

- 69) The change in a certain engineer's salary over time can be approximated by the linear equation  $y = 1500x + 47,500$  where  $y$  represents salary in dollars and  $x$  represents number of years on the job. According to this equation, after how many years on the job was the engineer's salary \$64,000? 69) \_\_\_\_\_

- A) 13 years                      B) 12 years                      C) 10 years                      D) 11 years

- 70) The relationship between the list price,  $x$ , in thousands of dollars, and the dealer invoice price,  $y$ , also in thousands of dollars, for pickup trucks can be approximated by the linear equation  $y = 0.715x + 2.82$ . Use this equation to predict the dealer invoice price for a pickup truck with a list price of 18.0 thousand dollars. 70) \_\_\_\_\_

- A) 21.231 thousand dollars                      B) 19.305 thousand dollars  
 C) 12.870 thousand dollars                      D) 15.690 thousand dollars

- 71) Suppose the sales of a particular brand of appliance satisfy the relationship  $S = 190x + 1200$ , where  $S$  represents the number of sales in year  $x$ , with  $x = 0$  corresponding to 1982. Find the number of sales in 1994. 71) \_\_\_\_\_

- A) 3480 sales                      B) 6770 sales                      C) 3290 sales                      D) 6960 sales

- 72) The mathematical model  $C = 400x + 30,000$  represents the cost in dollars a company has in manufacturing  $x$  items during a month. Based on this, how much does it cost to produce 400 items? 72) \_\_\_\_\_

- A) \$75.00                      B) \$0.19                      C) \$190,000                      D) \$160,000

73) Suppose the function  $y = 4t - 4.5$  determines the actual time that has elapsed, in minutes, for  $t$  minutes of a person's estimate of the elapsed time. Find the actual time that has elapsed for an estimate of  $t = 30$  minutes. 73) \_\_\_\_\_

A) 12 min                      B) 115.5 min                      C) 124.5 min                      D) 48 min

A) 173 mi                      B) 378 mi                      C) 345 mi                      D) 158 mi

75) If an object is dropped from a tower, then the velocity,  $V$  (in feet per second), of the object after  $t$  seconds can be obtained by multiplying  $t$  by 32 and adding 10 to the result. Write an equation expressing the velocity,  $V$ , in terms of the number of seconds,  $t$ . Use this function to predict the velocity of the object at time  $t = 7.7$  seconds. 75) \_\_\_\_\_

A) 256.4 feet per second                      B) 255.7 feet per second  
 C) 257.7 feet per second                      D) 254.4 feet per second

76) The information in the chart below gives the salary of a person for the stated years. Model the data with a linear function using the points (1, 24,100) and (3, 26,300). Then use this function to predict the salary for the year 2005. 76) \_\_\_\_\_

Year, $x$	Salary, $y$
1990, 0	\$23,500
1991, 1	\$24,100
1992, 2	\$25,200
1993, 3	\$26,300
1994, 4	\$27,200

A) \$40,020                      B) \$40,040                      C) \$40,000                      D) \$39,980

77) In order to receive a B in a course, it is necessary to get an average of 80% correct on two one-hour exams of 100 points each, on one midterm exam of 200 points, and on one final exam of 500 points. If a student scores 92, and 83 on the one-hour exams, and 141 on the midterm exam, what is the minimum score on the final exam that the person can get and still earn a B? 77) \_\_\_\_\_

158) The slope of 800 indicates that during his 12 years at the school, John's salary has increased by approximately \$800 per year.

159) Fixed costs occur only once. These costs may be startup costs related to the production of the new product. Variable costs depend on how much product is made. These costs may consist of labor, material, and maintenance.

For example, a company decided to make oak filing cabinets. Fixed costs would include the costs of purchasing and renovating plant space and the cost of manufacturing equipment. Variable costs would include the cost labor and the cost of materials.

160) An equation such as  $bx + c = 0$  has a slope of zero. (Answers may vary.)

161) Answers may vary. One possibility: The slope of a horizontal line is equal to zero because the y-values do not change as the x-values change. For example, the points (3, 4) and (7, 4) are two points on a horizontal line. The slope of this line is zero because  $m = \frac{4 - 4}{7 - 3} = \frac{0}{4} = 0$ .

162) Answers may vary. One possibility: It is not specific enough. The slope of a horizontal line is 0, while the slope of a vertical line is undefined.

163) Answers may vary. One possibility: Let (a, b) and (a, c),  $b \neq c$ , be any two different points on a vertical line. The slope of the line =  $\frac{y_1 - y_2}{x_1 - x_2} = \frac{b - c}{a - a} = \frac{b - c}{0}$ . Division by zero is undefined.

164) No. In the slope-intercept form of the equation of a line, x is multiplied by slope; however, the slope of a vertical line is undefined. (Explanations will vary.)

165) No, the data cannot be modeled by a linear equation because the reported cases are not increasing at a constant rate. Assume a linear equation, and examine the slope of the two line segments. The slope of the segment from (0, 372) to (8, 100,000) is 12,453.5 while the slope of the segment from (8, 100,000) to (11, 200,000) is 33,333.3. (Explanations will vary.)

166) Answers will vary. One possibility: The slope of the line through P<sub>1</sub> and P<sub>2</sub> is -2/3. The slope of the line through P<sub>2</sub> and P<sub>3</sub> is 3/2. Therefore, since the product of these slopes is -1, the lines are perpendicular and constitute a right angle in the triangle, making the triangle formed by these points a right triangle.
