Essay

95. The world marketplace is shrinking and changing. One of the vehicles that has been instrumental in this change is the General Agreement on Tariffs and Trade (GATT). Explain what GATT is and how it has affected international business.

Answer:

The General Agreement on Tariffs and Trade (GATT) provides a forum for multilateral discussion among countries to reduce trade barriers. Nations meet periodically to review the status of world trade and to negotiate mutually agreeable reductions in trade barriers.

The main operating principle of GATT is the concept of Most Favored Nation (MFN). The MFN status meant that any country which was a member state to a GATT agreement and which extended a reduction in tariff to another nation would have to automatically extend the same benefit to all members of GATT. However, there is no enforcement mechanism. Trade barriers were lowered but services were largely unaffected.

Difficulty: (1) Knowledge: (A) Page: 43

96. To improve on GATT the WTO was established. Explain what the WTO is, how it is different from GATT, and what specific functions the WTO is expected to perform.

Answer:

The World Trade Organization (the WTO) is different from GATT in that it has statutory powers with authority to adjudicate trade disputes among nations. The WTO is the new legal and institutional foundation for a multilateral trading system. It provides the contractual obligations determining how governments frame and implement domestic trade legislation and regulations.

WTO is not just an extension of GATT. The GATT was a multilateral agreement with no institutional foundations. WTO is a permanent institution with its own secretariat. WTO is legally binding. The WTO dispute settlement mechanism, is faster, more automatic and therefore much less susceptible to blockages than the old GATT system. In 2001, WTO's ninth round of trade talks called the Doha Development Agenda (Doha Round) was launched in Doha, Qatar. In September 2003, the Doha Round failed because of unresolved difference between developed and the developing nations.

97. Some of the greatest challenges in trade in the next century will come in the areas of information technology and intellectual property. Describe these challenges, the mechanisms that are in place to protect one's intellectual property, and how trade in general will be affected.

Answer:

With the advent of the information age, firms are faced with new situations. Not only is it easy for individuals to make duplicates of many works or to re-use their content in new works, but the physical manifestation of content is almost irrelevant. The United States, in an attempt to protect intellectual property rights, has insisted that intellectual property rights be dealt with in GATT and the WTO. Technology based protection of electronic information through hardware, software, or a combination thereof in the form of encryption and digital signatures have been suggested as a means of circumventing the problem of unauthorized copying.

Controlling copying is a difficult problem. The solution may be in not controlling the copies but instead controlling the relationship with the customers through subscriptions or membership. There are other larger questions or hurdles to be overcome. One is the rise of a truly efficient market for information. Second, is the role of and attempts by governments to regulate international commerce.

98. It has been suggested that cooperative inter-relationships between countries (regional groupings) can be classified into five broad categories. Briefly summarize and describe each of these categories and indicate differences that may be present.

Answer:

- a. *Free Trade Area*. This form has a higher level of integration than a loosely formed regional cooperation and is a formal agreement among two or more countries to reduce or eliminate customs duties and non-tariff barriers among partner countries.
 - 1). NAFTA is an illustration.
 - 2). The free trade area is not free of all trade barriers.
- b. *Customs Union*. When members of a free trade area add common external tariffs to the provisions of the free trade agreement then the free trade area becomes the customs union (ASEAN is an example).
- c. *Common Market*. A common market eliminates all tariffs and barriers to trade among members of the common market, adopts a set of external tariffs on non-members, and removes all restrictions on the flow of capital and labor among member nations.
- d. *Monetary Union*. In this form, member nations move to a common currency and a central bank.
 - 1). The European Union has achieved this step.
- e. *Political Union*. In this phase, new nations are created. Integration is achieved on a voluntary basis. A loose political union normally comes first (such as the British Commonwealth).
