# Solution Manual for Modern Business Statistics with Microsoft Excel 5th Edition Anderson Weeney Williams 12854333009781285433301 

Full link download<br>Test Bank:<br>https://testbankpack.com/p/test-bank-for-modern-business-statistics-with-microsoft-excel-5th-edition-anderson-weeney-williams-1285433300-<br>9781285433301/

# Solution Manual: <br> https://testbankpack.com/p/solution-manual-for-modern-business-statistics-with-microsoft-excel-5th-edition-anderson-weeney-williams-12854333009781285433301/ <br> <br> Chapter 2 <br> <br> Chapter 2 <br> <br> Descriptive Statistics: Tabular and <br> <br> Descriptive Statistics: Tabular and Graphical Displays 

 Graphical Displays}

## Learning Objectives

1. Learn how to construct and interpret summarization procedures for qualitative data such as: frequency and relative frequency distributions, bar graphs and pie charts.
2. Learn how to construct and interpret tabular summarization procedures for quantitative data such as: frequency and relative frequency distributions, cumulative frequency and cumulative relative frequency distributions.
3. Learn how to construct a dot plot and a histogram as graphical summaries of quantitative data.
4. Learn how the shape of a data distribution is revealed by a histogram. Learn how to recognize when a data distribution is negatively skewed, symmetric, and positively skewed.
5. Be able to use and interpret the exploratory data analysis technique of a stem-and-leaf display.
6. Learn how to construct and interpret cross tabulations, scatter diagrams, side-by-side and stacked bar charts.
7. Learn best practices for creating effective graphical displays and for choosing the appropriate type of display.

## Solutions:

1. 

$\ldots \frac{\text { Frequency }}{\text { Class }}-\frac{\text { Relative Frequency }}{60 / 120=0.50}-24 / 120=0.20$
2. a. $1-(.22+.18+.40)=.20$
b. $.20(200)=40$
c/d.

| Class | Frequency | Percent Frequency |
| :---: | :---: | :---: |
| A | $.22(200)=44$ | 22 |
| B | $.18(200)=36$ | 18 |
| C | $.40(200)=80$ | 40 |
| D | $.20(200)=40$ | $\underline{20}$ |
|  | Total |  |
|  |  | 100 |

3. a. $360^{\circ} \times 58 / 120=174^{\circ}$
b. $360^{\circ} \times 42 / 120=126^{\circ}$
C.

d.

## Response

4. a. These data are categorical.
b.

|  | Relative <br> Frequency |  |
| :---: | ---: | ---: |
| Show | 10 | 20 |
| Jep | 8 | 16 |
| JJ | 7 | 14 |
| OWS | 12 | 24 |
| THM | 13 | 26 |
| WoF | 50 | 100 |

c.

## Syndicated Television Shows

d. The largest viewing audience is for Wheel of Fortune and the second largest is for Two and a Half Men.
5. a.

| Name | Frequency | Relative <br> Frequency | Percent <br> Frequency |
| :--- | ---: | ---: | ---: |
| Brown | 7 | 0.14 | $14 \%$ |
| Johnson | 10 | 0.20 | $20 \%$ |
| Jones | 7 | 0.14 | $14 \%$ |
| Miller | 6 | 0.12 | $12 \%$ |
| Smith | 12 | 0.24 | $24 \%$ |
| Williams | $\underline{8}$ | 0.16 | $16 \%$ |
| Total: | 50 | 1 | $100 \%$ |

b.

Common U.S. Last Names

c.

d. The three most common last names are Smith (24\%), Johnson (20\%), Williams (16\%5)
6. a.

Relative

| Network | Frequency | \% Frequency |
| :---: | :---: | :---: |
| ABC | 6 | 24 |
| CBS | 9 | 36 |
| FOX | 1 | 4 |
| NBC | 9 | 36 |
| Total: | 25 | 100 |

b. For these data, NBC and CBS tie for the number of top-rated shows. Each has $9(36 \%)$ of the top 25. ABC is third with $6(24 \%)$ and the much younger FOX network has $1(4 \%)$.
7. a .

| Rating | Frequency | Percent Frequency |
| :--- | :---: | :---: |
| Excellent | 20 | 40 |
| Very Good | 23 | 46 |
| Good | 4 | 8 |
| Fair | 1 | 2 |
| Poor | $\underline{2}$ | $\underline{4}$ |
|  | 50 | 100 |

Management should be very pleased with the survey results. $40 \%+46 \%=86 \%$ of the ratings are very good to excellent. $94 \%$ of the ratings are good or better. This does not look to be a Delta flight where significant changes are needed to improve the overall customer satisfaction ratings.
b. While the overall ratings look fine, note that one customer ( $2 \%$ ) rated the overall experience with the flight as Fair and two customers (4\%) rated the overall experience with the flight as Poor. It might be insightful for the manager to review explanations from these customers as to how the flight failed to meet expectations. Perhaps, it was an experience with other passengers that Delta could do little to correct or perhaps it was an isolated incident that Delta could take steps to correct in the future.
8. a .

| Position | Frequency | Relative Frequency |
| :--- | :---: | :---: |
| Pitcher | 17 | 0.309 |
| Catcher | 4 | 0.073 |
| 1st Base | 5 | 0.091 |
| 2nd Base | 4 | 0.073 |
| 3rd Base | 2 | 0.036 |
| Shortstop | 5 | 0.091 |
| Left Field | 6 | 0.109 |
| Center Field | 5 | 0.091 |
| Right Field | 7 | $\underline{0.127}$ |
|  | 55 | 1.000 |

b. Pitchers (Almost 31\%)
c. 3rd Base (3-4\%)
d. Right Field (Almost 13\%)
e. Infielders (16 or $29.1 \%$ ) to Outfielders (18 or 32.7\%)
9. a.Living Area Live Now Ideal Community

| City | $32 \%$ | $24 \%$ |
| :--- | :---: | :---: |
| Suburb | $26 \%$ | $25 \%$ |
| Small Town | $26 \%$ | $30 \%$ |
| Rural Area | $16 \%$ | $21 \%$ |
| Total | $100 \%$ | $100 \%$ |

b. Where do you live now?

What do you consider the ideal community?

c. Most adults are now living in a city (32\%).
d. Most adults consider the ideal community a small town (30\%).
e. Percent changes by living area: City $-8 \%$, Suburb $-1 \%$, Small Town $+4 \%$, and Rural Area $+5 \%$. Suburb living is steady, but the trend would be that living in the city would decline while living in small towns and rural areas would increase.
10. a.

| Rating | Frequency |
| :--- | :---: |
| Excellent | 187 |
| Very Good | 252 |
| Average | 107 |
| Poor | 62 |
| Terrible | 41 |
| Total | 649 |

b.

| Rating | Percent <br> Frequency |
| :--- | :---: |
| Excellent | 29 |
| Very Good | 39 |
| Average | 16 |
| Poor | 10 |
| Terrible | 6 |
| Total | 100 |

c.

d. $29 \%+39 \%=68 \%$ of the guests at the Sheraton Anaheim Hotel rated the hotel as Excellent or Very

Good. But, $10 \%+6 \%=16 \%$ of the guests rated the hotel as poor or terrible.
e. The percent frequency distribution for Disney's Grand Californian follows:

| Rating | Percent <br> Frequency |
| :--- | :---: |
| Excellent | 48 |
| Very Good | 31 |
| Average | 12 |
| Poor | 6 |
| Terrible | 3 |
| Total | 100 |

$48 \%+31 \%=79 \%$ of the guests at the Sheraton Anaheim Hotel rated the hotel as Excellent or Very Good. And, $6 \%+3 \%=9 \%$ of the guests rated the hotel as poor or terrible.

Compared to ratings of other hotels in the same region, both of these hotels received very favorable ratings. But, in comparing the two hotels, guests at Disney's Grand Californian provided somewhat better ratings than guests at the Sheraton Anaheim Hotel.
11.

d.

e. There is skewness to the right.
f. $(11 / 50)(100)=22 \%$
19. a. The highest price stock is for IBM with a price of $\$ 109$ per share.

The lowest price stock is for Alcoa with a price of $\$ 11$ per share.
b. A class size of 10 results in 10 classes.

| Price per Share | Frequency |
| :---: | :---: |
| $\$ 10-19$ | 5 |
| $\$ 20-29$ | 10 |
| $\$ 30-39$ | 3 |
| $\$ 40-49$ | 2 |
| $\$ 50-59$ | 6 |
| $\$ 60-69$ | 2 |
| $\$ 70-79$ | 1 |
| $\$ 80-89$ | 0 |
| $\$ 90-99$ | 0 |
| $\$ 100-109$ | 1 |

May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

The general shape of the distribution is skewed to the right. Half of the companies (15) have a price per share less than $\$ 30$. A mid-priced stock appears to be in the $\$ 30$ to $\$ 49$ range, while the most frequently priced stock is in the $\$ 20$ to $\$ 29$ range.

Five stocks are less than $\$ 20$ per share (Alcoa, Bank of America, General Electric, Intel and Pfizer). Four stocks are $\$ 60$ or more per share (3M, Chevron, ExxonMobil and IBM).
d. A variety of comparisons are possible depending upon when the study is done.
20. a. Lowest $=12$, Highest $=23$
b.

| Hours in Meetings per |  | Percent |
| :---: | :---: | :---: |
| Week | Frequency | Frequency |
| $11-12$ | 1 | $4 \%$ |
| $13-14$ | 2 | $8 \%$ |

| $21-22$ | 4 | $16 \%$ |
| $23-24$ | 4 | $16 \%$ |
|  | 25 | $100 \%$ |

c.

The distribution is slightly skewed to the left.
21. $a / b / c / d$.

| Revenue | Frequency | Relative <br> Frequency | Cumulative <br> Frequency | Cumulative Relative <br> Frequency |
| :---: | :---: | :---: | :---: | :---: |
| $0-49$ | 6 | .12 | 6 | .12 |
| $50-99$ | 29 | .58 | 35 | .70 |
| $100-149$ | 11 | .22 | 46 | .92 |
| $150-199$ | 0 | .00 | 46 | .92 |
| $200-249$ | 1 | .02 | 47 | .94 |
| $250-299$ | 1 | .02 | 48 | .96 |
| $300-349$ | 0 | .00 | 48 | .96 |
| $350-399$ | 0 | .00 | 48 | .96 |
| $400-449$ | 2 | .04 | 50 | 1.00 |
| Total | 50 | 1.00 |  |  |

e. The majority of the large corporations (40) have revenues in the $\$ 50$ billion to $\$ 149$ billion range. Only 4 corporations have revenues of over $\$ 200$ billion and only 2 corporations have revenues over $\$ 400$ billion. .70, or $70 \%$, of the corporations have revenues under $\$ 100$ billion. . 30 , or $30 \%$, of the corporations have revenues of $\$ 100$ billion or more.
f.

The histogram shows the distribution is skewed to the right with four corporations in the $\$ 200$ to $\$ 449$ billion range.
g. Exxon-Mobil is America's largest corporation with an annual revenue of $\$ 443$ billion. Walmart is the second largest corporation with an annual revenue of $\$ 406$ billion. All other corporations have annual revenues less than $\$ 300$ billion. Most $(92 \%)$ have annual revenues less than $\$ 150$ billion.
22. a.

| \# U.S. <br> Locations | Frequency | Percent <br> Frequency |
| :---: | :---: | :---: |
| $0-4999$ | 10 | 50 |
| $5000-9999$ | 3 | 15 |
| $10000-14999$ | 2 | 10 |
| $15000-19999$ | 1 | 5 |
| $20000-2499$ | 0 | 0 |

| $35000-39999$ | 1 | 5 |
|  | 20 | 100 |

b.

c. The distribution is skewed to the right. The majority of the franchises in this list have fewer than 20,000 locations $(50 \%+15 \%+15 \%=80 \%)$. McDonald's, Subway and 7-Eleven have the highest number of locations.
23. a/b.

| Computer <br> Usage (Hours) | Frequency | Relative <br> Frequency |
| ---: | ---: | :---: |
| $0.0-2.9$ | 5 | 0.10 |
| $3.0-$ | 5.9 | 28 |
| $6.0-8.9$ | 8 | 0.56 |
| $9.0-11.9$ | 6 | 0.16 |
| $12.0-14.9$ | $\underline{3}$ | 0.12 |
|  | Total | 50 |

C.

Computer Usage (Hours)
d. The majority of the computer users are in the 3 to 6 hour range. Usage is somewhat skewed toward the right with 3 users in the 12 to 14.9 hour range.

May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.
24. Median Pay

| 6 | 6 | 7 | 7 |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 7 | 2 | 4 | 6 | 7 | 7 | 8 | 9 |  |
| 8 | 0 | 0 | 1 | 3 | 7 |  |  |  |
| 9 | 9 |  |  |  |  |  |  |  |
| 10 | 0 | 6 |  |  |  |  |  |  |
| 11 | 0 |  |  |  |  |  |  |  |
| 12 | 1 |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

The median pay for these careers is generally in the $\$ 70$ and $\$ 80$ thousands. Only four careers have a median pay of $\$ 100$ thousand or more. The highest median pay is $\$ 121$ thousand for a finance director.
Top Pay
10
10

11 $|$| 1 | 6 | 9 |  |
| :--- | :--- | :--- | :--- |
| 12 | 2 | 5 | 6 |
| 13 | 0588 |  |  |
| 14 | 0 | 6 |  |
| 15 | 2 | 5 | 7 |

The most frequent top pay is in the $\$ 130$ thousand range. However, the top pay is rather evenly distributed between $\$ 100$ and $\$ 160$ thousand. Two unusually high top pay values occur at $\$ 214$ thousand for a finance director and $\$ 221$ thousand for an investment banker. Also, note that the top pay has more variability than the median pay.

| Total | 17.77 | 25.08 | 20.64 | 13.90 | 22.62 | 100.00 |

There are six percent frequency distributions in this table with row percentages. The first five give the percent frequency distribution of income for each educational level. The total row provides an overall percent frequency distribution for household income.

The second row, labeled H.S. Graduate, is the percent frequency distribution for households headed by high school graduates. The fourth row, labeled Bachelor's Degree, is the percent frequency distribution for households headed by bachelor's degree recipients.
b. The percentage of households headed by high school graduates earning \$75,000 or more is $11.93 \%+12.07=24.00 \%$. The percent of households headed by bachelor's degree recipients earning $\$ 75,000$ or more is $18.72 \%+39.02 \%=57.74 \%$.
c. The percent frequency histogram for high school graduates.

May n8t be scanned; e8pied 8f dublieated; 8f p8sted t8 a publicly aceessible website; in whole of in part:

## Household Income (\$1000s)

The percent frequency distribution for college graduates with a bachelor's degree.

The histograms show that households headed by a college graduate with a bachelor's degree earn more than households headed by a high school graduate. Yes, there is a positive relationship between education level and income.
30. a. Column Percentages:

|  | Household Income (\$1000s) |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Education Level | Under 25 | $25.0-49.9$ | $50.0-74.9$ | $75.0-99.9$ | 100 or More | Total |  |

| H.S. Graduate | 37.52 | 37.05 | 33.04 | 25.73 | 16.00 | 29.97 |  |
| Some College | 21.42 | 28.44 | 30.74 | 31.71 | 24.43 | 27.21 |  |
| Bachelor's Degree | 6.75 | 11.33 | 18.72 | 25.19 | 32.26 | 18.70 |  |
| Beyond Bach. Deg. | 2.21 | 4.48 | 8.37 | 12.11 | 25.11 | 10.61 |  |
| Total | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 |  |

There are six percent frequency distributions in this table of column percentages. The first five columns give the percent frequency distributions for each income level. The percent frequency distribution in the "Total" column gives the overall percent frequency distributions for educational level. From that percent frequency distribution we see that $13.51 \%$ of the heads of households did not graduate from high school.
b. The column percentages show that $25.11 \%$ of households earning $\$ 100,000$ or more were headed by persons having schooling beyond a bachelor's degree. The row percentages show that $53.54 \%$ of the households headed by persons with schooling beyond a bachelor's degree earned $\$ 100,000$ or more. These percentages are different because they came from different percent frequency distributions and provide different kinds of information.
c. Compare the "under 25 " percent frequency distributions to the "Total" percent frequency distributions. We see that for this low income level the percentage with lower levels of education is higher than for the overall population and the percentage with higher levels of education is lower than for the overall population.

May net be seanned, cebied 8F duplicated; 8f posted t8 a publicty aceessible website, in whole of in part:

Compare the "100 or more" percent frequency distribution to "Total" percent frequency distribution. We see that for this high income level the percentage with lower levels of education is lower than for the overall population and the percentage with higher levels of education is higher than for the overall population.

From the comparisons it is clear that there is a positive relationship between household incomes and the education level of the head of the household.
31. a. The crosstabulation of condition of the greens by gender is

|  | below. Green Condition |  |  |
| :---: | :---: | :---: | :---: |
| Gender | Too Fast | Fine | Total |
| Male | 35 | 65 | 100 |
| Female | 40 | 60 | 100 |
| Tota | 75 | 125 | 200 |

The female golfers have the highest percentage saying the greens are too fast: 40/100 = $40 \%$. Male golfers have $35 / 100=35 \%$ saying the greens are too fast.
b. Among low handicap golfers, $1 / 10=10 \%$ of the women think the greens are too fast and $10 / 50=20 \%$ of the men think the greens are too fast. So, for the low handicappers, the men show a higher percentage who think the greens are too fast.
c. Among the higher handicap golfers, $39 / 51=43 \%$ of the woman think the greens are too fast and $25 / 50=50 \%$ of the men think the greens are too fast. So, for the higher handicap golfers, the men show a higher percentage who think the greens are too fast.
d. This is an example of Simpson's Paradox. At each handicap level a smaller percentage of the women think the greens are too fast. But, when the crosstabulations are aggregated, the result is reversed and we find a higher percentage of women who think the greens are too fast.

The hidden variable explaining the reversal is handicap level. Fewer people with low handicaps think the greens are too fast, and there are more men with low handicaps than women.
32. a.

|  | 5 Year Average Return |  |  |  |  |  |  |

| 4 | 5 |

d. The most frequent winning points have been 0 to 4 points and 15 to 19 points. Both occurred in 10 Super Bowls. There were 10 close games with a margin of victory less than 5 points, 10/43(100) $=$ $23 \%$ of the Super Bowls. There have also be 10 games, $23 \%$, with a margin of victory more than 20 points.
e. The closest games was the $25^{\text {th }}$ Super Bowl with a 1 point margin. It was played in Florida. The largest margin of victory occurred one year earlier in the $24^{\text {th }}$ Super Bowl. It had a 45 point margin and was played in Louisiana. More detailed information not available from the text information.
$25^{\text {th }}$ Super Bowl: 1991 New York Giants 20 Buffalo Bills 19, Tampa Stadium, Tampa, FL $24^{\text {th }}$ Super Bowl: 1990 San Francisco 49ers 55 Denver Broncos 10, Superdome, New Orleans, LA

Note: The data set SuperBowl contains a list of the teams and the final scores of the 43 Super Bowls. This data set can be used in Chapter 2 and Chapter 3 to provide interesting data summaries about the points scored by the winning team and the points scored by the losing team in the Super Bowl. For example, using the median scores, the median Super Bowl score was 28 to 13 .
46. a.

| Population in Millions | Frequency | \% Frequency |
| :---: | :---: | :---: | :---: |
| $0.0-2.4$ | 15 | $30.0 \%$ |
| $2.5-4.9$ | 13 | $26.0 \%$ |
| $5.0-7.4$ | 10 | $20.0 \%$ |
| $7.5-9.9$ | 5 | $10.0 \%$ |
| $10.0-12.4$ | 1 | $2.0 \%$ |

b. The majority of the start-up companies in this set have less than $\$ 90$ million in venture capital. Only 6 of the $50(12 \%)$ have more than $\$ 150$ million.
48. a.

| Industry | Frequency | \% Frequency |
| :--- | :---: | :---: |
| Bank | 26 | $13 \%$ |
| Cable | 44 | $22 \%$ |
| Car | 42 | $21 \%$ |
| Cell | 60 | $30 \%$ |
| Collection | 28 | $14 \%$ |
| Total | 200 | $100 \%$ |

b.

c. The cellular phone providers had the highest number of complaints.
d. The percentage frequency distribution shows that the two financial industries (banks and collection agencies) had about the same number of complaints. Also, new car dealers and cable and satellite television companies also had about the same number of complaints.
49. a.

| Yield $\%$ | Frequency | Percent Frequency |
| :---: | :---: | :---: |
| $0.0-0.9$ | 4 | 13.3 |
| $1.0-1.9$ | 2 | 6.7 |
| $2.0-2.9$ | 6 | 20.0 |
| $3.0-3.9$ | 10 | 33.3 |
| $4.0-4.9$ | 3 | 10.0 |
| $5.0-5.9$ | 2 | 6.7 |
| $6.0-6.9$ | 2 | 6.7 |
| $7.0-7.9$ | 0 | 0.0 |
| $8.0-8.9$ | 0 | 0.0 |
| $9.0-9.9$ | $\underline{1}$ | 3.3 |
| Total | 30 | 100.0 |

c. The distribution is skewed to the right.
d. Dividend yield ranges from $0 \%$ to over $9 \%$. The most frequent range is $3.0 \%$ to $3.9 \%$. Average dividend yields looks to be between $3 \%$ and $4 \%$. Over $50 \%$ of the companies (16) pay from $2.0 \%$ to $3.9 \%$. Five companies (AT\&T, DuPont, General Electric, Merck, and Verizon) pay $5.0 \%$ or more. Four companies (Bank of America, Cisco Systems, Hewlett-Packard, and J.P. Morgan Chase) pay less than $1 \%$.
e. General Electric had an unusually high dividend yield of $9.2 \%$. 500 shares at $\$ 14$ per share is an investment of $500(\$ 14)=\$ 7,000$. A $9.2 \%$ dividend yield provides $.092(7,000)=\$ 644$ of dividend income per year.
50.

| Level of Support | Percent Frequency |
| :--- | ---: |
| Strongly favor |  |
| Favor more than oppose |  |
| $1871 / 5372=30.10$ |  |
| Oppose more than favor |  |
| Strongly oppose | $1135 / 5372=34.83$ |
| Total | $749 / 5372=\underline{13.94}$ |
|  | 100.00 |

The results show support for a higher tax. Note that $30.10 \%+34.83 \%=64.93 \%$ of the respondents said they strongly favor or favor more than oppose a higher tax on higher carbon emission cars.
b. Country

| Percent Frequency |
| ---: |
| $1087 / 5372=20.2$ |
| $1045 / 5372=19.5$ |
| $1109 / 5372=20.6$ |
| $1111 / 5372=20.7$ |
| $1020 / 5372=\frac{19.0}{100.0}$ |

The poll had an approximately equal representation of the five countries with roughly $20 \%$ of the poll respondents coming from each country.
c. Converting the entries in the crosstabulation into column percentages provides the following

|  | results: Country |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Support | Great Britain | Italy | Spain | Germany | United States |
| Strongly favor | 31.00 | 31.96 | 45.99 | 19.98 | 20.98 |
| Favor more than oppose | 34.04 | 39.04 | 32.01 | 36.99 | 32.06 |
| Oppose more than favor | 23.00 | 17.99 | 13.98 | 24.03 | 26.96 |
| Strongly oppose | 11.96 | 11.01 | 8.03 | 18.99 | 20.00 |
| Total | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 |

Considering the percentage of respondents who favor the higher tax by either saying "strongly favor" or "favor more than oppose", we have the following favorable support for the higher tax in each country.

| Great Britain | $31.00+34.04=65.04 \%$ |
| :--- | :--- |
| Italy | $31.96+39.04=71.00 \%$ |
| Spain | $45.99+32.01=78.00 \%$ |
| Germany | $19.98+36.99=56.97 \%$ |
| United States | $20.98+32.06=53.04 \%$ |

More than $50 \%$ of the respondents favor the higher tax for the higher carbon emission cars in all five countries. But the support for the higher tax is greater in the European countries. Spain and Italy have the greatest support for the higher tax with $78 \%$ and $71 \%$ respectively. Germany is close in views to the United States with $56.97 \%$ expressing favor for the higher tax. United States shows the lowest level of support for the higher tax with $53.04 \%$. Note that United States ranks first in terms of the response "strongly oppose" the higher tax with $20 \%$ of the respondents providing this opinion.
51. a. The batting averages for the junior and senior years for each player are as follows:

Junior year:

$$
\begin{array}{lr}
\text { Allison Fealey } & 15 / 40=.375 \\
\text { Emily Janson } & 70 / 200=.350
\end{array}
$$

Senior year:

| Allison Fealey | $75 / 250=.300$ |
| :--- | :--- |
| Emily Janson | $35 / 120=.292$ |

Because Allison Fealey had the higher batting average in both her junior year and senior year, Allison Fealey should receive the scholarship offer.
b. The combined or aggregated two-year crosstabulation is as follows:

Combined 2-Year Batting

| Outcome | A. Fealev | E. Jansen |
| :--- | :---: | :---: |
| Hit | 90 | 105 |
| No Hit | 200 | 215 |
| Total At Bats | 290 | 320 |

Based on this crosstabulation, the batting average for each player is as follows:
Combined Junior/Senior Years

| Allison Fealey | $90 / 290=.310$ |
| :--- | ---: |
| Emily Janson | $105 / 320=.328$ |

Because Emily Janson has the higher batting average over the combined junior and senior years, Emily Janson should receive the scholarship offer.
c. The recommendations in parts (a) and (b) are not consistent. This is an example of Simpson's Paradox. It shows that in interpreting the results based upon separate or un-aggregated crosstabulations, the conclusion can be reversed when the crosstabulations are grouped or aggregated. When Simpson's Paradox is present, the decision maker will have to decide whether the un-aggregated or the aggregated form of the crosstabulation is the most helpful in identifying the desired conclusion. Note: The authors prefer the recommendation to offer the scholarship to Emily Janson because it is based upon the aggregated performance for both players over a larger number of at-bats. But this is a judgment or personal preference decision. Others may prefer the conclusion based on using the un-aggregated approach in part (a).

52 a.

| Size of Company |  |  |  |  |

c. Crosstabulation showing column percentages.

|  | Size of Company |  |  |
| :---: | :---: | :---: | :---: |
| Job Growth (\%) | Small | Midsized | Large |
| $-10-0$ | 13 | 21 | 5 |
| $0-10$ | 56 | 46 | 76 |
| $10-20$ | 22 | 7 | 11 |
| $20-30$ | 9 | 11 | 5 |
| $30-40$ | 0 | 11 | 3 |
| $60-70$ | 0 | 4 | 0 |
|  | Total | 100 | 100 |

d. Crosstabulation showing row percentages.

| Size of Company |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Job Growth (\%) | Small | Midsized | Large | Total |
| $-10-0$ | 33 | 50 | 17 | 100 |
| $0-10$ | 30 | 22 | 48 | 100 |
| $10-20$ | 54 | 15 | 31 | 100 |
| $20-30$ | 38 | 38 | 25 | 100 |
| $30-40$ | 0 | 75 | 25 | 100 |
| $60-70$ | 0 | 4 | 0 | 100 |

e. 12 companies had a negative job growth: $13 \%$ were small companies; $21 \%$ were midsized companies; and $5 \%$ were large companies. So, in terms of avoiding negative job growth, large companies were better off than small and midsized companies. But, although $95 \%$ of the large companies had a positive job growth, the growth rate was below $10 \%$ for $76 \%$ of these companies. In terms of better job growth rates, midsized companies performed better than either small or large companies. For instance, $26 \%$ of the midsized companies had a job growth of at least $20 \%$ as compared to $9 \%$ for small companies and $8 \%$ for large companies.
53. a.

c. Colleges in this sample founded before 1800 tend to be expensive in terms of tuition.
54. a.
