## ***Microeconomics: Principles, Applications, and Tools, 9e (O'Sullivan)*** **Chapter 2 The Key Principles of Economics**

### **2.1 The Principle of Opportunity Cost**

- 1) The opportunity cost of something is
- A) the cost of the labor used to produce it.
  - B) what you sacrifice to get it.
  - C) the price charged for it.
  - D) the search cost required to find it.

Answer: B

Diff: 1

Topic: The Principle of Opportunity Cost

Skill: Definition

AACSB: Reflective Thinking

Learning Outcome: Micro-20

- 2) The principle of opportunity cost
- A) is more relevant for firms than for individuals.
  - B) only refers to monetary payments.
  - C) is only relevant in economics.
  - D) is applicable to all decision making.

Answer: D

Diff: 2

Topic: The Principle of Opportunity Cost

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

- 3) The principle that the cost of something is equal to what is sacrificed to get it is known as
- A) the marginal principle.
  - B) principle of opportunity cost.
  - C) principle of diminishing returns.
  - D) reality principle.

Answer: B

Diff: 1

Topic: The Principle of Opportunity Cost  
Skill: Definition  
AACSB: Reflective Thinking  
Learning Outcome: Micro-20

4) The saying that "There's no such thing as a free lunch" refers to the

- A) marginal principle.
- B) spillover principle.
- C) principle of opportunity cost.
- D) reality principle.

Answer: C

Diff: 1

Topic: The Principle of Opportunity Cost

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

5) Jacinda quit her job as a blackjack dealer where she made \$42,000 per year to start her own florist business. Her business expenses are \$14,000 per year on rent, \$21,000 per year on supplies, and \$9,000 per year on part time help. As for her personal expenses, her apartment costs her \$12,000 per year and her personal bills are an extra \$6,000 per year. What is Jacinda's opportunity cost of running the business?

- A) \$104,000
- B) \$86,000
- C) \$62,000
- D) \$44,000

Answer: B

Diff: 2

Topic: The Principle of Opportunity Cost

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

6) An unemployed individual decides to spend the day fishing. The opportunity cost of fishing is

- A) the cost of bait and any other monetary expenses.
- B) zero, because the person doesn't have a job.
- C) the cost of bait, any other monetary expenses, and the value of the individual's wages while he was working.
- D) the cost of bait, any other monetary expenses, and the value of the best alternative use of the individual's time.

Answer: D

Diff: 2

Topic: The Principle of Opportunity Cost

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

7) Suppose that you own a house. What is the opportunity cost of living in the house? A) There is no opportunity cost because you own the house. B) There is no opportunity cost unless you could set up a business in the house. C) The opportunity cost is the rent you could have received from a tenant if you didn't live there. D) The opportunity cost is the cost of your monthly mortgage payment plus bills.

Answer: C

Diff: 2

Topic: The Principle of Opportunity Cost

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

8) Steven lives in a big city where there is a shortage of parking. He has a parking spot in his driveway where he parks his car. Which of the following statements is most correct? A) Steven has a lower opportunity cost of owning a car than his neighbor, who must rent a parking spot. B) The opportunity cost of using the spot is zero, because Steven owns the house. C) The opportunity cost of using the parking spot is the price he could charge someone else for using the spot.

D) The opportunity cost depends on how much Steven's mortgage payment is. Answer: C

Diff: 2

Topic: The Principle of Opportunity Cost

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

9) You rent a DVD of The Dark Knight Rises. The rental is for seven days and you watch the movie on the first day. You tell a friend about the film and your friend asks to come over and watch the movie with you before it is due back. What is your opportunity cost if you decide to watch the movie a second time instead of going to a football game?

A) the entire cost of the movie rental, since you have already watched the movie  
B) one half the rental cost, because you have already watched the movie one time  
C) the football game you forego by watching the movie again  
D) The answer depends on how much you liked the movie in the first place.

Answer: C

Diff: 2

Topic: The Principle of Opportunity Cost

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

10) Angelina, age seven, decides to dress up like Princess Fiona for Halloween. What is the opportunity cost of her decision?

- A) the cost of the costume
- B) the fact that she can't dress up like Dora the Explorer, her second choice
- C) zero, because seven-year-olds don't have opportunity costs
- D) the cost of the Lady Gaga costume which she did not want

Answer: B

Diff: 2

Topic: The Principle of Opportunity Cost

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

11) Spending money on a new car instead of a used car when you are on a fixed budget is an example of

- A) the incursion of an opportunity cost.
- B) isolating variables.
- C) a bad thing to do because you run out of money.
- D) living on the edge.

Answer: A

Diff: 1

Topic: The Principle of Opportunity Cost

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

12) Suppose that your tuition to attend college is \$24,000 per year and you spend \$8,000 per year on room and board. If you were working full time, you could earn \$30,000 per year. What is your opportunity cost of attending college for one year?

- A) \$32,000
- B) \$38,000
- C) \$54,000
- D) \$62,000

Answer: C

Diff: 1

Topic: The Cost of College

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

13) Suppose that your tuition to attend college is \$14,000 per year and you spend \$5,000 per year on room and board. If you were working full time, you could earn \$26,000 per year. What is your opportunity cost of attending college?

- A) \$19,000
- B) \$31,000
- C) \$40,000
- D) \$45,000

Answer: C

Diff: 1

Topic: The Cost of College

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

14) The opportunity cost of going to college

- A) is zero if your parents pay your tuition.
- B) is equal to the cost of tuition, room and board, and other expenses.
- C) includes wages you lose by going to school instead of working.
- D) is the same for all students at a particular school who pay full tuition.

Answer: C

Diff: 1

Topic: The Cost of College

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

15) You have an hour between your economics and math classes. What is the opportunity cost of that time if you use it to complete your math homework instead of your economics homework?

- A) the economics homework you could have completed
- B) the math homework you chose to complete
- C) the cost of your calculator and math textbook
- D) zero, because it doesn't cost any money to do your math

homework Answer: A

Diff: 2

Topic: The Cost of College

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

16) The sacrifices made by societies in order to engage in military spending represent

- A) the nominal costs of military spending.
- B) the real costs of military spending.
- C) the opportunity costs of military spending.
- D) the excessive costs of military spending.

Answer: C

Diff: 1

Topic: The Cost of Military Spending

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

17) The trade-offs made by the U.S. government to fund the war in Iraq

- A) prove that the government is spending too much on the war.
- B) show that the government is justified in its war spending.
- C) exceed the benefits derived from the war.
- D) represent what was potentially sacrificed to engage in the war.

Answer: D

Diff: 1

Topic: The Cost of Military Spending

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

18) According to the possible trade-off example between warships and drinking water in the text, the policy question that should be considered in Malaysia is

- A) Do the opportunity costs of the warships exceed their nominal costs?
- B) Do the nominal costs of the warships exceed their real costs?
- C) Do the benefits of the warships exceed their opportunity costs?
- D) Do the real costs of the warships exceed their nominal costs?

Answer: C

Figure 2.1

24) Referring to Figure 2.1, if you increase the production of farm goods, what other area is affected? A) the price of produce

- B) the production of manufactured goods
- C) how much people can purchase
- D) the wages earned by farm workers

Answer: B

Diff: 1

Topic: Opportunity Cost and the Production Possibilities Curve, graphing

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

25) The production possibilities curve in Figure 2.1 illustrates the notion of A) increased factory goods production.

B) increased farm produce production. C) diminishing resources.

D) opportunity cost.

Answer: D

Diff: 1

Topic: Opportunity Cost and the Production Possibilities Curve, graphing

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

26) Refer to Figure 2.1. If you are producing 600 tons of agricultural products per year, what is the maximum amount of manufactured products you can produce per year?

A) 300 tons

B) 500 tons

C) 600 tons

D) 700 tons

Answer: A

Diff: 1

Topic: Opportunity Cost and the Production Possibilities Curve, graphing

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

27) Refer to Figure 2.1. If you choose to produce only agricultural products, what is the maximum quantity you can produce per year?

A) 200 tons

B) 400 tons

C) 600 tons

D) > 600 tons

Answer: D

Diff: 1

Topic: Opportunity Cost and the Production Possibilities Curve, graphing

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

28) Refer to Figure 2.1. What is the opportunity cost of increasing production of manufactured products from 500 tons to 600 tons per year?

A) 200 tons of agricultural products per

year B) 400 tons of agricultural products per

year C) 500 tons of agricultural products per

year D) 600 tons of agricultural products

per year Answer: A

29) If an economy is fully utilizing its resources, it can produce more of one product only if it

- A) doubles manufacturing of the product.
- B) produces less of another product. C) adds more people to the labor force.
- D) reduces the prices of the most expensive products.

Answer: B

Diff: 1

Topic: Opportunity Cost and the Production Possibilities Curve

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

30) If you remove resources from factory production, the quantity of factory goods will

- A) increase.
- B) decrease.
- C) remain the same but their price will decrease.
- D) be diverted to other production.

Answer: B

Diff: 1

Topic: Opportunity Cost and the Production Possibilities Curve

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

31) If an economy is represented by a point inside its production possibilities curve,

- A) it can produce more of one product even if it does not produce less of another product.
- B) it can produce more of one product only if it produces less of another product.
- C) it cannot produce more of one product unless it stops producing the other product entirely.
- D) it cannot possibly produce more of one product, even if it produces less of another product.

Answer: A

Diff: 1

Topic: Opportunity Cost and the Production Possibilities Curve

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

32) If an economy is represented by a point along its production possibilities curve,

- A) it can produce more of one product even if it does not produce less of another product.
- B) it can produce more of one product only if it produces less of another product.
- C) it cannot produce more of one product unless it stops producing the other product entirely.
- D) it cannot possibly produce more of one product, even if it produces less of another product.

Answer: B

Diff: 1

AACSB: Reflective Thinking

Learning Outcome: Micro-20

41) Trade-offs involve an exchange of one thing for another because resources are limited and can be used in different ways.

Answer: TRUE

Diff: 1

Topic: The Principle of Opportunity Cost

Skill: Definition

AACSB: Reflective Thinking

Learning Outcome: Micro-20

42) The notion of opportunity cost allows the measurement of trade-offs.

Answer: TRUE

Diff: 1

Topic: The Principle of Opportunity Cost

Skill: Definition

AACSB: Reflective Thinking

Learning Outcome: Micro-20

43) In order to get his bachelor's degree, Timothy gave up an offer for a full time job as a bartender. Therefore, Timothy incurred an opportunity cost.

Answer: TRUE

Diff: 1

Topic: The Cost of College

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

44) The opportunity cost of going to a particular college is not the same for everyone.

Answer: TRUE

Diff: 1

Topic: The Cost of College

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

45) The cost of a bachelor's degree in philosophy equals the tuition plus the cost of room and board. Answer: FALSE

Diff: 1

Topic: The Cost of College

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

46) What is an opportunity cost?

Answer: An opportunity cost is what you sacrifice to get something.

Diff: 1

Topic: The Principle of Opportunity Cost

Skill: Definition

AACSB: Reflective Thinking

Learning Outcome: Micro-20

47) Suppose that you lend \$5,000 to a friend who pays you back \$5,400 the next year. Suppose that prices that year rose by six percent and the real rate of return in the stock market was five percent. Your friend says that he or she was being more than fair by giving you more than the rate of inflation as a return.

What do you think?

Answer: The opportunity cost of that money was not just the six percent inflation, but also the real rate of return that would have been enjoyed had the money been put in the stock market. For you to have been indifferent between loaning your money versus keeping it, your friend should have reimbursed you by \$5,550, or an 11% return. This is another example of considering all the costs, both the loss in purchasing power of the money due to inflation and the implicit cost of the return that could have been earned if the money was invested in the stock market.

Diff: 2

Topic: The Principle of Opportunity Cost

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

48) What is the opportunity cost of investing \$10,000 of your own money in a business you wish to start? Answer: The opportunity cost of your \$10,000 is the money you lose because you cannot invest the money elsewhere.

Diff: 1

Topic: The Principle of Opportunity Cost

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

49) What do economists mean when they say that there is no such thing as a free lunch?

Answer: Everything has a cost, even when you do not pay money for it. Suppose that somebody bought you lunch. Resources from the economy were used to make that lunch, even though those resources may not belong to you. Consequently, the economy gave up anything else it could have made with the resources it used to make the lunch. The opportunity cost of that lunch is the lost opportunity to use those resources in some other way.

Diff: 2

Topic: The Principle of Opportunity Cost

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

50) What is the opportunity cost of your college degree?

Answer: A quick answer would be to say that the cost is the tuition, room and board, and books expenditures that are borne during the college years. But such a statement would be incorrect. First, it understates one aspect of costs: one is giving up income while a student. But it also overstates the costs in another dimension: people would eat and sleep somewhere regardless of their attendance in college. Therefore, one should not consider room and board to be part of the cost of college attendance.

29) What is a marginal cost?

Answer: A marginal cost is the additional cost resulting from a small increase in the production of a good.

Diff: 1

Topic: The Marginal Principle

Skill: Definition

AACSB: Reflective Thinking

Learning Outcome: Micro-20

30) What is a marginal benefit?

Answer: A marginal benefit is the additional benefit resulting from a small increase in the production of a good.

Diff: 1

Topic: The Marginal Principle

Skill: Definition

AACSB: Reflective Thinking

Learning Outcome: Micro-20

31) When a firm hired its tenth worker, its factory output increased by four units per month. Would you expect the firm's output to increase by eight more units per month if the firm hired two more workers?

Answer: No. The principle of diminishing marginal returns suggests that after some point of increasing returns, each incremental worker should have a progressively lower level of marginal productivity.

Diff: 2

Topic: Marginal Principle

Skill: Analytical

AACSB: Analytical Thinking

Learning Outcome: Micro-20

32) Consider a firm that is trying to determine how many hours to remain open in a day. How would the firm make this decision?

Answer: The firm would continue to stay open as long as the incremental, or marginal, benefit of staying open (say, the increased revenues) each extra hour exceeds (or at least equals) the incremental, or marginal, costs (e.g., electricity, wages, etc.) incurred from staying open that hour.

Diff: 2

Topic: Marginal Principle

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

33) Different people eat different amounts of food when they go to buffet restaurants, even though they all pay the same price. Explain how this relates to the marginal principle.

Answer: The marginal monetary cost of eating more is zero, so people will eat until they would not enjoy eating other bite. There is an implicit cost of eating more once you are full (such as extra weight gain and physical discomfort). Therefore, people will eat until marginal benefit equals marginal cost, and this will occur at different amounts of food for different people.

Diff: 2

Topic: The Marginal Principle

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-20

34) Use the marginal principle to explain why government mandated safety features in automobiles during the 1960s and 1970s resulted in an increase in collisions between automobiles and bicycles.

Answer: The mandated safety features decreased the marginal cost of speed: People who wear seat belts suffer less severe injuries in a collision, so every additional unit of speed is less costly to the driver. Drivers felt more secure because they were better insulated from harm in the event of a collision, and so they drove faster. As a result, the number of collisions between cars and bicycles increased, meaning that a safer environment for drivers led to a more hazardous environment for bicyclists.

Diff: 1

Topic: The Principle of Diminishing Returns

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-1

19) Explain the concept of diminishing returns.

Answer: The principle of diminishing returns shows that in the short run, beyond some point, output will increase at a decreasing rate. For example, producing more output in an existing production facility by increasing the number of workers sharing the facility will bring into effect the principle of diminishing returns, as output will eventually increase but at a decreasing rate.

Diff: 1

Topic: The Principle of Diminishing Returns

Skill: Conceptual

AACSB: Reflective Thinking

Learning Outcome: Micro-1

20) You are running a small yard maintenance business for the summer. What do you expect to happen to the number of yards you can maintain in a day as you add workers if you don't purchase more capital equipment (like mowers and leaf blowers)?

Answer: It is likely that as you add workers, you will get incrementally less output out of each additional worker. Holding constant your materials, such as trucks, lawnmowers, etc., you'll almost surely be able to maintain more yards per day. But as you hire more workers, there might be waits for use of the tools, or for transportation to the next job. This is the prediction of the principle of diminishing returns.

AACSB: Reflective Thinking Skills

Learning Outcome: Micro-1

64) What is the opportunity cost of your college degree?

Answer: A quick answer would be to say that the cost is the tuition, room and board, and books expenditures that are borne during the college years. But such a statement would be incorrect. First, it understates one aspect of costs: one is giving up income while a student. But it also overstates the costs in another dimension: people would eat and sleep somewhere regardless of their attendance in college. So one should not consider room and board to be part of the cost of college attendance.

66) Suppose that you lend \$1,000 to a friend who pays you back \$1,100 the next year. Suppose that prices that year rose by 8% and the real rate of return in the stock market was 4%. Your friend says that he or she was being more than fair by giving you more than the rate of inflation as a return. What do you think?

Answer: The opportunity cost of that money was not just the 8% inflation, but also the real rate of return that would have been enjoyed had the money been put in the stock market. For you to have been indifferent between loaning your money versus keeping it, your friend should have reimbursed you by \$1,120, or a 12% return. This is another example of considering all the costs, both the loss in purchasing power of the money due to inflation and the implicit cost of the return that could have been earned if the money was invested in the stock market.

44) Different people eat different amounts of food when they go to buffet restaurants, even though they all pay the same price. Explain how this relates to the marginal principle.

Answer: The marginal monetary cost of eating more is zero, so people will eat until they would not enjoy eating other bite. There is an implicit cost of eating more once you are full (extra weight gain and physical discomfort). Therefore, people will eat until marginal benefit equals marginal cost, and this will occur at different amounts of food for different people.

AACSB: Reflective Thinking Skills

Learning Outcome: Micro-1

26) You are running a small yard maintenance business for the summer. What do you expect to happen to the number of yards you can maintain in a day as you add workers if you don't purchase more capital equipment (like mowers and leaf blowers)?

Answer: It is likely that as you add workers, you will get incrementally less output out of each additional worker. Holding constant your materials, such as trucks, lawn mowers, etc., you'll almost surely be able to maintain more yards per day. But as you hire more workers, there might be waits for the use of the tools, or for transportation to the next job.

Diff: 2

Topic: The Principle of Diminishing Returns

Skill: Analytical AACSB:

Analytic Skills Learning

Outcome: Micro-1

27) When a firm hired its tenth worker, its factory output increased by four units per month. Would you expect the firm's output to increase by eight more units per month if the firm hired two more workers?  
Answer: No. The principle of diminishing marginal returns suggests that after some point of increasing returns, each incremental worker should have a progressively lower level of marginal productivity.

Skill: Conceptual

AACSB: Reflective Thinking Skills

Learning Outcome: Micro-1

35) If your salary increases and the cost of goods in stores increase at the same rate, does a unit of money have *more* or *less* buying power?

Answer: Since prices have risen in stores, each unit, i.e. dollar, can buy less and its purchasing power is less.

Diff: 1

Topic: The Real-Nominal Principle

Skill: Conceptual

AACSB: Reflective Thinking Skills

Learning Outcome: Micro-1

36) Suppose you earn \$50,000 per year in 2015. If your income increases by 8 percent while inflation increases by 10% in 2016, then calculate how much your real income has increased between 2015 and 2016.

Answer: Because inflation increased by 10 percent while nominal income increased only by 8 percent, then the real growth in income between 2015 and 2016 is approximately -2 percent (a loss). A 2 percent loss in real income is approximately \$1,000.

To get the actual amount of the loss:

Your income grows by 8 percent to \$54,000. Because inflation went up by 10 percent, then the real value of your income in 2015 dollars is  $\$54,000/1.10 = 49,090.90$ , or a loss in real income of \$909.10.
