**Unit 02
Nutrition Information: Fact or Fiction?**

Multiple Choice Questions

1. A researcher observes that first-grade children who only eat foods sweetened with honey seem to behave the same as first-grade children who eat foods sweetened with cane sugar. After making the observation, the research decides to conduct a study to explore whether eating honey has any affect on school-age children's behavior. The researcher wants to follow the basic steps of the scientific method. Now that he's made the observation, his next step will be to
- A. form at least two basic conclusions about behavioral problems that affect children who eat sweeteners such as honey.
 - B. analyze information about the general dietary practices and common behavioral problems of first-grade children.
 - C. ask a group of peer reviewers for their help in designing a single-blind study involving the dietary practices of children.
 - D.** develop a question that's based on his observations of the children's behavior and their intakes of sweeteners such as honey.

Blooms Level: 2. Understand

Learning Outcome: 2.01.01 Define all of the key terms in this module.

Learning Outcome: 2.01.02 List the basic steps of the scientific method as it relates to nutrition research in general.

Learning Outcome: 2.01.03 Discuss ways that scientists conduct nutrition-related research that involves human subjects.

Module: 2.01 Nutrition: Science for Consumers

Section: 2.01a Collecting Science-based Evidence

Topic: Nutrition Basics

Unit 02 - Nutrition Information: Fact or Fiction?

2. A medical researcher asked 50 people with painful, arthritic knees to rub a cream that contained vitamin E on their knees for two weeks. At the end of the two weeks, she asked the subjects whether their knee pain improved, stayed about the same, or worsened during the treatment period. All 50 subjects reported improvement in their knee pain. Based on this information, which of the following statements is true?

- A. The results of this study prove that rubbing a cream that contains vitamin E on arthritic knees is a good way to relieve knee pain.
- B. The researcher should find a peer-review group to analyze her findings about the vitamin E-containing cream as a treatment for knee pain.
- C.** The results about the benefits of using a vitamin E cream for knee pain are questionable, because the researcher didn't have a control group.
- D. The researcher shouldn't report her findings, until she uses a single-blind study to test the vitamin E-containing cream.

Learning Outcome: 2.01.01 Define all of the key terms in this module.

Learning Outcome: 2.01.02 List the basic steps of the scientific method as it relates to nutrition research in general.

Learning Outcome: 2.01.03 Discuss ways that scientists conduct nutrition-related research that involves human subjects.

Module: 2.01 Nutrition: Science for Consumers

Section: 2.01a Collecting Science-based Evidence

Topic: Nutrition Basics

3. A group of researchers wants to conduct a scientific study to investigate dietary factors that affect the development of obesity. Which of the following activities is likely to be the first step of their research efforts?

- A.** observing the general dietary practices of obese people
- B. submitting an article that explains the experiment's design to a newspaper
- C. analyzing data collected during the study
- D. reporting their results on a popular television program

Blooms Level: 1. Remember

Learning Outcome: 2.01.02 List the basic steps of the scientific method as it relates to nutrition research in general.

Module: 2.01 Nutrition: Science for Consumers

Topic: Nutrition Basics

4. Researchers at a major American university plan a scientific study to investigate lifestyle factors that contribute to heart disease. Which of the following activities is most likely to be a component of their research efforts?

- A. obtaining the approval of the Federal Trade Commission (FTC) to conduct research on human subjects
- B.** submitting an article describing the study and its results to a peer-reviewed journal
- C. announcing the results of the study on a popular TV program
- D. using a single-blind study that includes placebos to test the question

Blooms Level: 1. Remember

Learning Outcome: 2.01.01 Define all of the key terms in this module.

Learning Outcome: 2.01.02 List the basic steps of the scientific method as it relates to nutrition research in general.

Module: 2.01 Nutrition: Science for Consumers

Section: 2.01a Collecting Science-based Evidence

Topic: Nutrition Basics

5. A scientist conducts a study to determine the effects of the mineral cadmium on the weight of mice. She adds 5 mcg of the mineral to the daily diet of 100 4-week-old laboratory mice. Every week, the researcher weighs and records the weight of each mouse. At the end of the study, the scientist notes that 3 mice died, 40 mice lost weight, 40 mice gained weight, and the remaining 17 mice didn't gain or lose weight during the 12-week period. Based on this information, what would you tell the researcher about her findings?

- A. The findings are very interesting and provide scientific proof that cadmium causes weight loss.
- B.** The findings are not meaningful because of the way the scientist designed her study.
- C. The findings are biased because the scientist used mice instead of humans in her study.
- D. The findings are newsworthy and important enough to be published in a peer-reviewed nutrition journal.

Blooms Level: 4. Analyze

Learning Outcome: 2.01.02 List the basic steps of the scientific method as it relates to nutrition research in general.

Module: 2.01 Nutrition: Science for Consumers

Section: 2.01a Collecting Science-based Evidence

Topic: Nutrition Basics

6. A nutrition researcher adds 30 mg of the mineral iron to the daily diet of 50 4-week-old laboratory mice. After ten weeks, the scientist takes blood samples from each mouse. According to his findings, the mice developed abnormal red blood cells. Based on this information and your knowledge of scientific research, what would you tell him?
- A. He should report his findings to other nutrition scientists, so they can repeat his study and confirm the results.
 - B. He should call a press conference and report his findings to the public, so they can avoid consuming excess iron.
 - C.** He should consider his findings as an observation and redesign the study to include a control group.
 - D. He should prepare a research article for submission to a peer-reviewed nutrition journal.

Blooms Level: 4. Analyze

Learning Outcome: 2.01.01 Define all of the key terms in this module.

Learning Outcome: 2.01.02 List the basic steps of the scientific method as it relates to nutrition research in general.

Section: 2.02a Anecdotes and Testimonials

Topic: Nutrition Basics

9. Emily has brittle fingernails that crack and split easily. Emily's mother advises her daughter to take gelatin pills 3 times/day, because she has heard the practice strengthens fingernails. The mother's nutrition-related advice about the benefit of taking gelatin pills is an example of a(an)

- A. scientific conclusion.
- B. testimonial.
- C. anecdote.**
- D. biased report.

Blooms Level: 2. Understand

Learning Outcome: 2.02.02 Explain the difference between an anecdote and a testimonial.

Module: 2.02 Spreading Nutrition Misinformation

Section: 2.02a Anecdotes and Testimonials

Topic: Nutrition Basics

10. Dylan takes garlic pills to lower his blood cholesterol level, and he recommends the pills to his friends, because he thinks the pills are helpful. Dylan's nutrition-related advice to his friends is an example of a(an)

- A. testimonial.
- B. bias.
- C. motive.
- D. anecdote.**

Blooms Level: 2. Understand

Learning Outcome: 2.02.02 Explain the difference between an anecdote and a testimonial.

Module: 2.02 Spreading Nutrition Misinformation

Section: 2.02a Anecdotes and Testimonials

Topic: Nutrition Basics

11. Having a control group enables researchers to

- A. provide specific treatments to participants of the group.
- B. compare findings of the control group with those of the experimental group.**
- C. avoid using harmful interventions when testing members of the experimental group.
- D. test possible questions for future research efforts.

Blooms Level: 1. Remember

Learning Outcome: 2.01.01 Define all of the key terms in this module.

Learning Outcome: 2.01.03 Discuss ways that scientists conduct nutrition-related research that involves human subjects.

Module: 2.01 Nutrition: Science for Consumers

Section: 2.01a Collecting Science-based Evidence

Topic: Nutrition Basics

12. Phil is a participant in a study designed to examine the effects of taking a new protein-containing product on muscle tissue development. Phil suspects he's in the experimental group, because he's certain his muscles are bigger and stronger as a result of taking the product supplied by the researchers. When the study is completed, Phil learns that he didn't receive the new source of protein. Phil thinks the researchers made a mistake—he's certain his muscle mass increased while he consumed the product. According to this information, Phil's belief that his physical condition improved while he participated in the study is an example of

- A.** the placebo effect.
- B. an anecdotal report.
- C. human subject bias.
- D. participant fatigue.

Blooms Level: 2. Understand

Learning Outcome: 2.01.03 Discuss ways that scientists conduct nutrition-related research that involves human subjects.

Module: 2.03 Becoming a More Critical Consumer of Nutrition Information

Section: 2.02a Anecdotes and Testimonials

Topic: Nutrition Basics

13. Which of the following statements is untrustworthy or misleading because it contains a "red flag" of unreliable nutrition-related information?

- A. People who have complaints about false or misleading health claims should report them to the Federal Trade Commission.
- B.** People who have cancer should take vitamin C pills because the pills have been clinically proven to cure cancer.
- C. People who have questions about medical conditions should seek answers from practitioners who have had the proper training and licensing.
- D. People who have concerns about health-related products or treatments should be skeptical to avoid being cheated out of their money.

Blooms Level: 4. Analyze

Gradable: automatic

Learning Outcome: 2.03.03 Identify common "red flags" that are signs of nutrition misinformation.

Module: 2.03 Becoming a More Critical Consumer of Nutrition Information

Section: 2.03a Becoming a More Skeptical Consumer

Section: 2.03b Look for "Red Flags" of Misinformation

Section: 2.03c The Internet

Topic: Nutrition Basics

14. Researchers are conducting a study to determine the effects of vitamin C on the human immune system. The study involves providing pills that contain vitamin C to one group of human subjects and pills that do not contain vitamin C or other active ingredients to another group of people. The pills that do not contain the vitamin are

- A. antidotes.
- B. supplements.
- C. placebos.**
- D. treatments.

Blooms Level: 2. Understand

Learning Outcome: 2.01.01 Define all of the key terms in this module.

Module: 2.01 Nutrition: Science for Consumers

Section: 2.01a Collecting Science-based Evidence

Topic: Nutrition Basics

15. Researchers are conducting a study to determine the effects of vitamin D on the human body. The study involves providing pills that contain vitamin D to one group of human subjects and pills that do not contain the vitamin or other active ingredients to another group of people. The pills that do not contain vitamin D are

- A. placebos.**
- B. antidotes.
- C. distractors.
- D. interventions.

Blooms Level: 1. Remember

Learning Outcome: 2.01.03 Discuss ways that scientists conduct nutrition-related research that involves human subjects.

Module: 2.01 Nutrition: Science for Consumers

Module: 2.01 Nutrition: Science for Consumers

Section: 2.01a Collecting Science-based Evidence

Topic: Nutrition Basics

18. The government agency that enforces consumer protection laws by investigating false or misleading health-related claims is the

- A. Federal Trade Commission (FTC).**
- B. Environmental Protection Agency (EPA).
- C. Agricultural Research Service (ARS).
- D. Centers for Disease Control and Prevention (CDC).

Blooms Level: 1. Remember

Learning Outcome: 2.03.04 Describe how to identify reliable sources of nutrition information.

Module: 2.02 Spreading Nutrition Misinformation

Section: 2.03c The Internet

Topic: Nutrition Basics

19. Mitch recently tried a hair-restoring product that he purchased from an Internet website. The package's label displayed the following claim: "Rubbing a tablespoon of 'NutraTerraMino' on your scalp each day will cure the hair loss associated with the aging process." After a month of using "NutraTerraMino" daily, he stopped because the product made his hair fall out. Based on this information, Mitch should file a complaint with the A. Bureau of Health Fraud.

B. Environmental Protection Agency.

C. Department of Public Safety.

D. Federal Trade Commission.

Blooms Level: 3. Apply

Learning Outcome: 2.03.03 Identify common "red flags" that are signs of nutrition misinformation.

Learning Outcome: 2.03.04 Describe how to identify reliable sources of nutrition information.

Module: 2.03 Becoming a More Critical Consumer of Nutrition Information

Section: 2.03c The Internet

Topic: Nutrition Basics

20. You recently watched an infomercial at an Internet website in which an actor promoted a new weight loss product. The actor stated that you'll lose weight almost instantly by consuming the product, because it contains a secret herbal formula that's both safe and effective. The promoter also said that you can continue to eat all of your usual foods and still lose weight, while taking the herbal formula. You're concerned that people might waste their money on this product. Which agency should you contact to file a complaint about the website?

A. National Organization Against Health Fraud

B. Consumer Protection Alliance

C. Department of Human Resources

D. Federal Trade Commission

Blooms Level: 3. Apply

Section: 2.03a Becoming a More Skeptical Consumer

Topic: Nutrition Basics

34. An ad for a weight-loss product contains several dishonest and misleading statements. Which of the following statements is a "red flag" statement that's in the ad?
- A. This product should not be taken during pregnancy, because it can harm your baby.
 - B.** This product is guaranteed to raise your metabolism by 400%, which is why it causes you to lose weight safely and rapidly.
 - C. This product may raise your blood pressure and increase your risk of a heart attack, so don't take more than the recommended dose.
 - D. This product can damage your liver when combined with other drugs, so do not take it with alcohol and/or medications.

Blooms Level: 2. Understand

Learning Outcome: 2.03.03 Identify common "red flags" that are signs of nutrition misinformation.

Module: 2.03 Becoming a More Critical Consumer of Nutrition Information

Section: 2.03b Look for "Red Flags" of Misinformation

Topic: Nutrition Basics

35. In the United States, which agency investigates complaints about false or misleading health-related claims that appear in food advertisements?
- A. Organization for Honesty in Advertising
 - B. Environmental Protection Agency
 - C. Academy of Nutrition and Dietetics
 - D.** Federal Trade Commission

Blooms Level: 1. Remember

Learning Outcome: 2.03.04 Describe how to identify reliable sources of nutrition information.

Module: 2.03 Becoming a More Critical Consumer of Nutrition Information

Section: 2.03c The Internet

Topic: Nutrition Basics

36. Which of the following statements is true?
- A. A nutritionalist has the same credentials as a registered dietitian.
 - B.** In general, registered dietitians are reliable sources of nutrition information.
 - C. Quackery is the practice of dietetics without proper training and credentials.
 - D. A person with a PhD has the proper training to be registered dietitian.

Blooms Level: 2. Understand

Learning Outcome: 2.04.01 Explain how to identify reliable nutrition experts.

Module: 2.04 Seeking Reliable Nutrition Information

Section: 2.04a Nutrition Experts

Topic: Nutrition Basics

37. A person claims his newly invented device treats cancer without surgery, medication, or other forms of conventional medical therapy. However, people who have used the device report that it was not helpful, and it may have harmed them. According to this information, the inventor's claims and his device are

- A.** quackery.
- B. anecdotal evidence.
- C. placebos.
- D. clinically proven.

Blooms Level: 2. Understand

Learning Outcome: 2.03.01 Define all of the key terms in this module.

Module: 2.03 Becoming a More Critical Consumer of Nutrition Information

Section: 2.03a Becoming a More Skeptical Consumer

Topic: Nutrition Basics

38. Which of the following statements is true?

- A.** The First Amendment of the U.S. Constitution often protects people who spread nutrition misinformation.
- B. You can ask your personal physician for nutrition advice, because physicians have the same training as registered dietitians.
- C. In the United States, only registered dietitians can provide nutrition information legally.
- D. Registered dietitians are not required to maintain their certification regularly.

Blooms Level: 2. Understand

Gradable: automatic

Learning Outcome: 2.04.01 Explain how to identify reliable nutrition experts.

Module: 2.04 Seeking Reliable Nutrition Information

Section: 2.02c Why Is There So Much Nutrition Misinformation?

Topic: Nutrition Basics

39. During a television interview, Dr. Ima Quack provides the following statement. "Most Americans suffer from nutritional deficiency diseases and will develop cancer within the next 10 years because they are not taking my megavitamin formula therapy." Dr. Quack's statement is an example of a(n)

- A. biased report.
- B. scare tactic.**
- C. anecdotal evidence.
- D. scientific observation.

Blooms Level: 2. Understand

Learning Outcome: 2.03.03 Identify common "red flags" that are signs of nutrition misinformation.

Module: 2.03 Becoming a More Critical Consumer of Nutrition Information

Section: 2.03b Look for "Red Flags" of Misinformation

Topic: Nutrition Basics

40. A magazine advertisement for a weight loss product includes before and after photos of a woman who supposedly lost 50 pounds in 3 weeks while taking the product. The bottom of the ad includes the statement, "Results are not typical." This statement is an example of a(n)

- A. testimonial.
- B. anecdote.
- C. placebo.
- D. disclaimer.**

Blooms Level: 2. Understand

Learning Outcome: 2.03.03 Identify common "red flags" that are signs of nutrition misinformation.

Module: 2.03 Becoming a More Critical Consumer of Nutrition Information

Section: 2.03b Look for "Red Flags" of Misinformation

Topic: Nutrition Basics

41. A television advertisement for a protein-rich drink includes before and after photos of a young man. In the "before" photo, the man appears unhappy and slim, but he looks thrilled and very muscular in the "after" photo. The narrator claims the man gained 30 pounds of "solid muscle" while drinking the protein formula daily for 2 months. At the bottom of the man's after photo, you notice a statement in small print that's difficult to read. According to the statement, "results may vary." This statement is an example of a
- A. disclaimer.
 - B. placebo.
 - C. warning.
 - D. bias.

Blooms Level: 2. Understand

Learning Outcome: 2.03.03 Identify common "red flags" that are signs of nutrition misinformation.

Module: 2.03 Becoming a More Critical Consumer of Nutrition Information

Section: 2.03b Look for "Red Flags" of Misinformation

Topic: Nutrition Basics

42. A scientist would like to collect information concerning the health of a large group of older adults. To obtain this information, the scientist conducts a
- A. medical history survey.
 - B. double-blind study.
 - C. controlled human experiment.
 - D. double-blind study.

Blooms Level: 1. Remember

Learning Outcome: 2.01.03 Discuss ways that scientists conduct nutrition-related research that involves human subjects.

Module: 2.01 Nutrition: Science for Consumers

Section: 2.01a Collecting Science-based Evidence

Topic: Nutrition Basics

43. Which of the following statements is true?

- A.** Scientists typically use different methods to conduct research, which explains why studies involving humans often have conflicting results.
- B. Scientists developed dietary recommendations for the U.S. population after analyzing results of a single American study, the Framingham Heart Study.
- C. Scientists have peer reviewers analyze the designs of their human research studies, because the peer-review process reduces research bias.
- D. Scientists are unlikely to obtain money to conduct research, if they don't respect the opinions and beliefs of the people in agencies who fund such projects.

Blooms Level: 2. Understand

Learning Outcome: 2.01.04 Explain why results of similar studies can provide different findings.

Module: 2.01 Nutrition: Science for Consumers

Section: 2.01b Confusion and Conflict

Topic: Nutrition Basics
