Chapter 02 - Conducting Research in Psychology

**Chapter 02
Conducting Research in Psychology**

Multiple Choice Questions

1. (p. 35)

_____ entails collecting observations, or data, from the real world and evaluating whether those data support our ideas or not.

- A. Speculation
- B. Biases
- C. Science**
- D. Hypotheses

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

2. (p. 35) Which of the following is true of human observation?

- A. Our brain perceives events as accurately as the best available digital video equipment.
- B. Our senses can be fooled with relative ease because of which our observations can lead us astray.**
- C. Generalizations based on our sensory experiences tend to be always correct.
- D. One of the advantages of human observation is that what we witness in one situation can be easily applied to all similar situations.

APA Outcome: 5.2 Develop a working knowledge of the content domains of psychology
Accessibility: Keyboard Navigation
Bloom's: Understand
Difficulty: Medium
Topic: Scientific Method

3. (p. 36) _____ sciences study the world of stars, light, waves, atoms, the earth, compounds, and molecules.

- A. Biological
- B. Social
- C. Physical**
- D. Environmental

APA Outcome: 1.1 Use Scientific reasoning to interpret behavior

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

4. (p. 36)

Which of the following is a physical science?

A.

Psychokinesis

B.

Astrology

C.

Astronomy

D.

Genetics

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

5. (p. 36) _____ sciences study humans both as individuals and as groups.

A.

Chemical

B. Biological

C. Physical

D. Social

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

6. (p. 37) _____ helps draw a line between one's belief of the world and the actual reality.

A. Problem solving

B. Scientific thinking

C. Psychological research

D. Cultural understanding

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Scientific Method

7. (p. 37) According to the author, the first attitude of science is _____.

A. practical thinking

B. intellectual honesty

C.

questioning skepticism

D. questioning authority

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

8. (p. 37) According to Carl Sagan, _____ is the second attitude of science.
- A. questioning authority
 - B. intellectual honesty
 - C. practical thinking
 - D. open skepticism**

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

9. (p. 37) When the central tenet of knowing is not what people think and believe, but rather how nature behaves, then we must accept the data and follow them wherever they take us. This attitude is known as _____.
- A. intellectual honesty**
 - B. scientific thinking
 - C. open skepticism
 - D. cultural understanding

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

10. (p. 37)

When can scientists help ensure accurate and honest presentation of results?

A.

When they protect their methods of inquiry from others

B.

When they announce their findings immediately after a study

C.

When they ignore the data that are contrary to their theory

D.

When they allow their work to be evaluated by other scientists

APA Outcome: 5.2 Develop a working knowledge of the content domains of psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

11. (p. 37)

Intellectual honesty, which is the third scientific attitude, ensures that scientists

A.

remain skeptical of new findings.

B.

do not accept true data as results.

C.

do not represent false data as true.

D.

do not reject false results.

APA Outcome: 1.1 Use Scientific reasoning to interpret behavior

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Scientific Method

12. (p. 38)

Which of the following is the first basic process of the scientific method?

A. Predict

B. Observe

C. Test

D. Interpret

APA Outcome: 1.1 Use Scientific reasoning to interpret behavior

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

13. (p. 38) The last process of the scientific method is to _____.
- A. communicate
 - B. observe
 - C. test
 - D. predict

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology
Accessibility: Keyboard Navigation
Bloom's: Remember
Difficulty: Basic
Topic: Scientific Method

14. (p. 38) Which of the following is NOT a basic process of the scientific method?
- A. Observing
 - B.**
 - C. Interpreting
 - D. Testing

Creating

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Bloom's: Remember
Difficulty: Basic
Topic: Scientific Method

15. (p. 38) In the _____ and _____ stages of the scientific method, researchers express their expectations as a theory.
- A. communication; testing
 - B. prediction; interpretation
 - C.** observation; prediction
 - D. communication; prediction

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology
Accessibility: Keyboard Navigation
Bloom's: Remember
Difficulty: Medium
Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

16. (p. 38)

A theory is defined as a:

A.

practice that appears to be and claims to be a science, even though it does not use the scientific method to come to conclusions.

B.

set of experiments conducted to confirm the results of a scientific study.

C.

specific, informed, and testable prediction of what kind of outcome should occur under a particular condition.

D.

set of related assumptions from which testable predictions can be made.

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Medium

Topic: Scientific Method

17. (p. 38) Which of the following is true about theories?

A. Theories cannot explain facts.

B. Theories organize and explain what we have observed.

C. Theories prevent people from making observations.

D.

Theories, in science, are nothing more than mere guesses.

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

18. (p. 38)

Identify an accurate statement about scientific theories.

A.

They are not facts.

B.

They do not generate any expectations.

C.

They are merely guesses and observations.

D.

They should not be tied to real evidence.

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Scientific Method

19. (p. 38) A _____ is a specific, informed, and testable prediction of what kind of outcome should occur under a particular condition.

A. theory

B. hypothesis

C. replication

D. variable

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

20. (p. 38)

A study was conducted in various cities around the world to determine the driving abilities of people of different age groups. The study found that older adults are better drivers than young adults. The results of this study can be regarded as a _____.

A.

hypothesis

B.

theory

C.

doctrine

D.

tenet

APA Outcome: 5.2 Develop a working knowledge of the content domains of psychology

Accessibility: Keyboard Navigation

Bloom's: Apply

Difficulty: Hard

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

21. (p. 38)

In the fourth step of the scientific method, scientists use mathematical techniques to _____ the results and determine whether they are significant and whether they closely fit the prediction.

A.

communicate

B.

replicate

C.

interpret

D.

observe

APA Outcome: 1.1 Use Scientific reasoning to interpret behavior

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

22. (p. 38)

To _____ a hypothesis, scientists select one of a number of established research methods, along with the appropriate measurement techniques.

- A. predict
- B. observe
- C.
replicate

D. test

APA Outcome: 5.2 Develop a working knowledge of the content domains of psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

23. (p. 38)

A study was conducted by a group of researchers in Asian cities to determine the driving abilities of people of different age groups. The study found that older adults are better drivers than young adults. Another group of researchers conducted the same study in North American cities to determine if they could duplicate the results of the first study. In this scenario, the scientific method followed by the second group of researchers can be termed as _____.

A.

interpretation

B.

prediction

C.

observation

D.

replication

APA Outcome: 5.2 Develop a working knowledge of the content domains of psychology

Accessibility: Keyboard Navigation

Bloom's: Apply

Difficulty: Hard

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

24. (p. 38)

Replication of a study is important to:

A.

confirm the results of the study.

B.

formulate the hypothesis of the study.

C.

express the expectations of the study.

D.

interpret the results of the study.

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

25. (p. 38)

Whether a result holds or not, new predictions can be generated from the data, leading in turn to new studies. This is why the process of scientific discovery is _____.

A. repetitive

B. replicative

C. cumulative

D. degradative

APA Outcome: 5.2 Develop a working knowledge of the content domains of psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Scientific Method

26. (p. 38) The process of scientific discovery is cumulative. This means that:

- A. older knowledge is discarded for newer and modern knowledge.
- B. previous knowledge builds on older knowledge.**
- C. newer knowledge is rejected because research is not authentic.
- D. previous knowledge is retained for lack of new resources.

APA Outcome: 5.2 Develop a working knowledge of the content domains of psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Scientific Method

27. (p. 40) _____ refers to practices that appear to be and claim to be science, but in fact do not use the scientific method to come to their conclusions.

- A. Antiscience
- B. Pseudoscience**
- C.

Bioscience

D.

Ethnoscience

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

28. (p. 40) Practitioners of pseudoscience:

A.

conduct carefully planned scientific studies.

B. back up their claims with sound, experimental research data.

C. allow their findings to be rigorously scrutinized.

D. do not challenge or question their own assumptions.

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Scientific Method

29. (p. 40) Which of the following would be considered a pseudoscience?

A. Anthropology

B. Astrology

C. Psychology

D. Biology

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

30. (p. 41)

According to Bem & Horonton (1994) and Rosenthal (1986), there has been some scientifically sound evidence for _____, which is normally regarded as a pseudoscience.

A.

astrology

B.

telepathy

C.

intelligent design

D.

creation science

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Scientific Method

Chapter 02 - Conducting Research in Psychology

31. (p. 41)

Which of the following is true of the differences between science and pseudoscience?

A.

Science uses statistics to express research data, whereas pseudoscience does not.

B.

The content area studied in science is narrow, whereas it is very vast in pseudoscience.

C.

Science encourages open skepticism of its findings, whereas pseudoscience does not.

D.

Science makes no real advances in knowledge, whereas pseudoscience does.

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Bloom's: Understand

Difficulty: Medium

Topic: Research Methods

Chapter 02 - Conducting Research in Psychology

33. (p. 41-42)

A variable can be defined as:

A.

a specific, informed, and testable prediction of an outcome.

B.

the repetition of a study to confirm results.

C.

anything that changes, or differs, within or between individuals.

D.

a related assumption from which testable predictions can be made.

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty: Basic

Topic: Research Methods

34. (p. 42) Attitudes toward pork, grooming procedures, educational status, and number of dental visits per year are all _____ that differ from individual to individual and may be of interest to psychologists.

A.

assumptions

B. variables

C. hypotheses

D. methods

APA Outcome: 5.2 Develop a working knowledge of the content domains of psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Research Methods

Chapter 02 - Conducting Research in Psychology

35. (p. 42) Which of the following is true about the principles of research design?

- A. The design chosen for a given study depends on the answers provided by the population.
- B.

The way the different variables, used by researchers, influence each other is irrelevant to the research design.

C. The first step in obtaining a sample is for the researchers to decide the makeup of the entire group.

D.

Research is almost always conducted on large populations and not on samples.

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Research Methods

36. (p. 42) The first step in obtaining a sample is for the researchers to decide the makeup of the _____ in which they are interested.

- A. topic of research
- B. variable
- C.

research design

D. group

Chapter 02 - Conducting Research in Psychology

39. (p. 42)

Sarah wants to conduct a study about differences in the levels of emotion of jealousy between men and women. She asks 400 male and female college graduates in the United States a series of questions about hypothetical scenarios of partner infidelity.

What is Sarah's population?

A.

All the men studying in the United States

B.

The chosen female graduates

C.

The chosen male and female college graduates

D.

Men and women in the United States

APA Outcome: 5.3 Describe applications that employ discipline-based problem solving

Accessibility: Keyboard Navigation

Bloom's: Apply

Chapter 02 - Conducting Research in Psychology

41. (p. 42)

Sarah wants to conduct a study about differences in the levels of emotion of jealousy between men and women. She asks 400 male and female college graduates in the United States a series of questions about hypothetical scenarios of partner infidelity.

How can Sarah ensure that the results of her study are more accurate?

A.

By ensuring that the sample accurately represents people of different ethnicities

B.

By increasing the number of men in the sample

C.

By increasing the number of women in the sample

D.

By ensuring that a higher number of Asian Americans are included in the sample

Topic: Research Methods

Chapter 02 - Conducting Research in Psychology

42. (p. 43)

Which statement best describes the term descriptive designs?

A.

There are methods used to assign participants to different research conditions, so that all the participants have the same chance of being in any specific group.

B.

There are research designs that include independent and dependent variables and random assignment of participants to control and experimental groups or conditions.

C.

They are design studies in which a researcher defines a problem and variable of interest but makes no prediction and does not control or manipulate anything.

D.

These are studies that measure two or more variables and their relationship to one another; they are not designed to show causation.

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Topic: Research Methods

Chapter 02 - Conducting Research in Psychology

47. (p. 43)

From the following, identify an accurate statement about case studies.

A.

They do not involve observations that stretch for over a year.

B.

They are based on one-on-one relationships.

C.

They involve collecting data about different legal cases that are under trial.

D.

They involve scientific experimentations on different groups of animals.

APA Outcome: 1.1 Use Scientific reasoning to interpret behavior

Accessibility: Keyboard Navigation

Bloom's: Remember

Chapter 02 - Conducting Research in Psychology

48. (p. 44)

The following is an excerpt from an in-depth paper Dr. Smith, a therapist, wrote about her client: "Irene experienced the loss of her parents at an early age. She is now 36, divorced, and has two children. Irene has difficulty maintaining steady employment. Eight months ago, she was diagnosed with major depressive disorder. Irene is responding well to an experimental antidepressant and to cognitive behavioral therapy. She has a hopeful prognosis." This research method can be best termed as a(n) _____.

A.

interview

B.

case study

C. naturalistic observation

D.

survey

APA Outcome: 5.3 Describe applications that employ discipline-based problem solving

Accessibility: Keyboard Navigation

Bloom's: Apply

Difficulty: Hard

Topic: Research Methods

49. (p. 44) An area of psychology called _____ examines in detail the lives of

historically important people and provides an example of the richness and value of case studies and studying individual lives over time.

A. psychobiography

B. psychohistory

C.

iconography

D.

histography

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Bloom's: Remember

Difficulty: Basic

Topic: Research Methods

Chapter 02 - Conducting Research in Psychology

50. (p. 44)

In a naturalistic observation, a researcher:

A.

asks people directly or indirectly what they think, feel, or have done.

B.

observes one person, often over a long period of time.

C.

observes and records behavior in the real world.

D.

asks questions that can have completely open-ended answers.

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty: Medium

Topic: Research Methods

Chapter 02 - Conducting Research in Psychology

51. (p. 44)

An advantage of naturalistic observation is that it:

A.

allows researchers to learn from the lives of historically important people.

B.

gives researchers a look at real behavior in the real world.

C.

makes it easier for researchers to manage large numbers of participants.

D.

allows researchers to ask people directly or indirectly what they think or feel.

APA Outcome: 5.2 Develop a working knowledge of the content domains of psychology

Bloom's: Understand

Difficulty: Medium

Topic: Research Methods

52. (p. 44)

Chan Lee, an Asian primatologist, studied different groups of gorillas over a period of 18 years. She studied them daily in the subtropical forests of Africa to understand their mating and reproductive habits. Based on her observations, Chan found that male gorillas are ready to mate when they are 15 years of age. In this scenario, descriptive method of research used by Chan can be best termed as a(n) _____.

A.

interview

B.

case study

C. naturalistic observation

D.

survey

APA Outcome: 5.3 Describe applications that employ discipline-based problem solving

Accessibility: Keyboard Navigation

Bloom's: Apply

Difficulty: Hard

Topic: Research Methods

53. (p. 44) Which of the following is an example of naturalistic observation?

A.

A biological psychologist manipulates the caffeine dosages administered to rats and records the running distances of the rats.

B. A cognitive psychologist who is interested in problem solving asks groups of twenty-year-olds, forty-year-olds, and sixty-year-olds to solve a word puzzle.

C. A clinical psychologist carefully considers his client's responses to questions about her childhood.

D. A developmental psychologist watches, from behind a hidden window, the play patterns of four-year-olds.

APA Outcome: 5.3 Describe applications that employ discipline-based problem solving

Accessibility: Keyboard Navigation

Bloom's: Apply

Difficulty: Hard

Topic: Research Methods

54. (p. 45) _____ are a widely-used technique for gaining information about peoples' thoughts and behaviors.

- A. Correlational designs
- B. Naturalistic observations
- C. Case studies
- D. Interviews**

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Which of the following statements regarding correlational studies is true?

A.

The major advantage of the correlational approach is that it establishes whether one variable actually causes the other.

B.

Correlations range between -1.00 and +1.00, with coefficients near -1.00 indicating that there is no relationship between the two variables.

C.

Correlational studies are useful when the variables can be easily manipulated or controlled.

D. Correlational designs measure two or more variables and their relationship to one another.

Dr. Adriana conducts a study to determine if players who wear a new type of soccer uniform made from a specially designed fabric will perform better in soccer matches. She recruits a professional soccer team to participate in her study. She randomly assigns half of the men to wear the new-material uniforms made in the color blue and the other half to wear old-material uniforms made in the color red. Although the men know about the test, they are not told which of the two uniforms is made from the new material. They are asked to wear their assigned uniforms and score as many goals as possible in a game against one another. Dr. Adriana notes the number of goals scored. Ultimately, the players who are wearing the old uniforms score more goal, and therefore, win the game. Dr. Adriana speculates that the new uniforms are not more beneficial to performance than the old uniforms, but she decides to rerun the test a few more times.

What is the dependent variable in Dr. Adriana's study?

- A. The old uniforms
- B. The new uniforms
- C.** The number of goals scored
- D. The color blue or red

80. (p. 49)

Dr. Adriana conducts a study to determine if players who wear a new type of soccer uniform made from a specially designed fabric will perform better in soccer matches. She recruits a professional soccer team to participate in her study. She randomly assigns half of the men to wear the new-material uniforms made in the color blue and the other half to wear old-material uniforms made in the color red. Although the men know about the test, they are not told which of the two uniforms is made from the new material. They are asked to wear their assigned uniforms and score as many goals as possible in a game against one another. Dr. Adriana notes the number of goals scored. Ultimately, the players who are wearing the old uniforms score more goal, and therefore, win the game. Dr. Adriana speculates that the new uniforms are not more beneficial to performance than the old uniforms, but she decides to rerun the test a few more times.

From a scientific viewpoint, why was it important for Dr. Ariana to randomly assign the players to wear new or old uniforms?

A.

She wanted to make sure that the uniforms do not affect the outcome of the game played by the players.

B.

She wanted the players to feel they all had a chance of wearing their old uniforms, in which they would likely be more comfortable.

C.

She wanted to ensure that the performance of the players will be uniformly improved by wearing their respective uniforms.

D.

She wanted to ensure that each player had an equal chance of wearing the new or old uniform.

112. (p. 58)

_____ can be defined as measures that are used to describe and summarize research.

A.

Descriptive statistics

B.

Inferential statistics

C.

Random graphs

D.

Statistical inferences

APA Outcome: 5.1 Describe key concepts, principles, and overarching themes in psychology

Chapter 02 - Conducting Research in Psychology

120. (p. 58)

The mean score of a batch of students for the midterm exam was 78.2, and the standard deviation was 15.8. The batch's mean score on the final exam was 81.3, with a standard deviation of 4.5. Based on these statistics, which of the following can be interpreted?

A.

The batch performed much better on the midterm exam than on the final exam.

B.

The mean revealed how spread out the batch's scores were.

C. The most common score on the final exam was lower than the most common score on the midterm exam.

D.

There was more variability in the scores of the midterm exam than of the final exam.

Chapter 02 - Conducting Research in Psychology

127. (p. 63)

Informed consent to participate in a psychological study means that the:

A.

participant knows his or her role in the study and understands its risks and benefits.

B.

researcher carefully selects and approves each participant for the study.

C.

institution in which the study will be conducted has approved the study.

D.

the consent cannot be omitted even for completely anonymous surveys.

Chapter 02 - Conducting Research in Psychology

132. (p. 63)

Irene Bialik, a psychologist, wants to study how the habit of telling lies affects marital relationships. She contacts married couples from across the country to participate in her study. She lets them know that the only cost of participation would be that they would need to reveal if they have ever lied to their parents. Irene also informs them that they will be paid an amount of \$1,000 each for participating in the study. In this scenario, which guideline of psychological research best describes the one followed by Irene?

A.

Beneficence

B.

Justice

C.

Confidentiality

D.

Privacy

134. (p. 63)

Which of the following statements is true of the Stanford Prison Experiment?

A.

All participants were fully informed about the fact that they would be assigned the roles of a prisoner or a guard.

B.

All participants were informed of the details and the extent to which being in this study would be like being in a real prison world.

C.

All participants were told upfront that, if they were assigned to the prisoner role, they would be strip-searched.

D.

All participants were informed that they might experience physical pain or psychological distress during the study.
