92) Explain the continuum of board involvement.

Answer: The board of directors continuum reflects the degree of involvement (from high to low) in the strategic management process. Boards can range from phantom boards with no real involvement to catalyst boards with a very high degree of involvement. Passive phantom or rubber stamp boards typically never initiate or determine strategy unless a crisis occurs.

Nominal participation reflects a board involved to a limited degree in the performance or review of selected key decisions, indicators, or programs of management. An active board approves, questions, and makes final decisions on mission, strategy, policies, and objectives. It also has active board committees and performs fiscal and management audits. The catalyst board takes the leading role in establishing and modifying the mission, objectives, strategy and policies. It also has a very active strategy committee.

93) Contrast agency theory and stewardship theory.

Answer: Agency theory states that problems arise in corporations because the agents (top management) are not willing to bear responsibility for their decisions unless they own a substantial amount of stock in the corporation. The theory suggests that a majority of a board needs to be from outside the firm so that top management is prevented from acting selfishly to the detriment of the shareholders.

Stewardship theory proposed that, because of their long tenure with the corporation, insiders (senior executives) tend to identify with the corporation and its success. Rather than use the firm for their own ends, these executives are thus most interested in guaranteeing the continued life and success of the corporation.

96) Explain the impact of the Sarbanes-Oxley Act on corporate governance.

Answer: In response to the many scandals uncovered since 2000, the U.S. Congress passed the Sarbanes-Oxley Act in June 2002. This act was designed to protect shareholders from the excesses and failed oversight that characterized failures at Enron, Tyco, WorldCom, Adelphia Communications, Qwest, and Global Crossing, among other prominent firms. Several key elements of Sarbanes-Oxley were designed to formalize greater board independence and oversight. For example, the act required that all directors serving on the audit committees be independent of the firm and receive no fees other than for services as a director. Additionally, boards may no longer grant loans to corporate officers. The act also established formal procedures for individuals to report incidents of questionable accounting or auditing. Firms are prohibited from retaliating against anyone reporting wrong doing. Both the CEO and CFO must certify the corporation's financial information. The Act banned auditors from providing both external and internal audit services to the same company. The bill also required that firms identify whether they have a "financial expert" serving on the audit committee who is independent from management.

97) What are the responsibilities of top management?

Answer: Top management responsibilities involve getting things accomplished through and with others in order to meet the corporate objectives. Top management's job is thus multidimensional and is oriented toward the welfare of the total organization. Specific top management tasks vary from firm to firm and are developed from an analysis of the mission, objectives, strategies, and

key activities of the corporation. Tasks are typically divided among the members of the top management team.

The CEO, with the support of the rest of the top management team, must successfully handle two primary responsibilities crucial to the effective strategic management of the corporation: (1) provide executive leadership and a strategic vision, and (2) manage the strategic planning process.
